

2050

Majority of US coastal areas likely threatened by 30+ flooding days each year

Improve Flood Prediction and Preparedness

Powered by SAS® Analytics for IoT and Microsoft® Azure IoT

SAS' solution, built on Microsoft Azure, helps you predict, prepare for, and respond to flooding incidents. We combine weather data, sensors that measure the height, depth and flow of water bodies, and advanced analytics to equip you with real-time situational awareness that helps you alert emergency services and improve citizen safety.

Protect

Improve citizen safety and emergency response services with real-time visibility and flood predictions

Respond

Reduce the impact of flooding incidents on property and infrastructure by automating and streamlining response

Improve

Enhance emergency planning with improved situational awareness and historical insights
