Azure Sentinel Proof of Value (PoV) Automator

Evaluating Azure Sentinel Could Not Be Easier!

Microsoft **Azure Sentinel**, the first *truly* cloud native SIEM, eliminates security infrastructure set-up and maintenance, and elastically scales to meet your organisations' needs.

The result is faster provisioning and above all significant cost savings.

What Do *You* Get?

**Easy-to-use automated portal to set up your free trial**

Access to leading Microsoft Security SOC experts to aid with your evaluation

Access advanced features within Azure Sentinel

Experience your own data, processes, and procedures with this 'real-life' PoV

Automated and Ready-To-Go!

The **Azure Sentinel PoV Automator** automatically orchestrates:

Azure Sentinel deployment for customer in their tenancy

Native Microsoft Cloud Connectors into Azure Sentinel

Standard alerting/ dashboarding/rules

Live contact with 24x7 SOC

Frequent SOC incident response review during free trial to enable tuning of alerts/dashboards/rules

Step away from the time, process, costs, and resource burdens associated with traditional evaluations, and *step into the future* with the easy, cost-effective, and automated Azure Sentinel PoV and ensure your valuable time is optimised!

PoV Next Steps
## Machine Learning and Automation

Within this PoV, Azure Sentinel can automate incident response and cut down on false positives with industry-leading machine learning models — ultimately saving your Security Operations Team valuable time.

Go beyond rule-based detections and manual investigations with these advanced features…all available within your PoV!

In addition, as the PoV starts, you are connected to **Satisnet's** 24x7 Security Operations Centre (SOC) and assigned a SOC expert to work with you over your 30-day free trial.

- **Assist you in fully understanding and evaluating the platform, and help answer any questions**
- Weekly/fortnightly-based reviews during 30-day trial
    - Covering incident response and illustrating how the platform can and should be used to provide insights, real-world threat hunting and forensics capabilities
- **Illustrate how Azure Sentinel's built-in machine learning models can help reduce the false positives and enable your security team to focus on the alerts that matter most**

The Satisnet SOC will also illustrate how you can use Azure Sentinel's native Security Orchestration, Automation and Response (SOAR) functionality to automate responses to alerts with playbooks, ticketing system integration and business workflows using Microsoft Power BI.
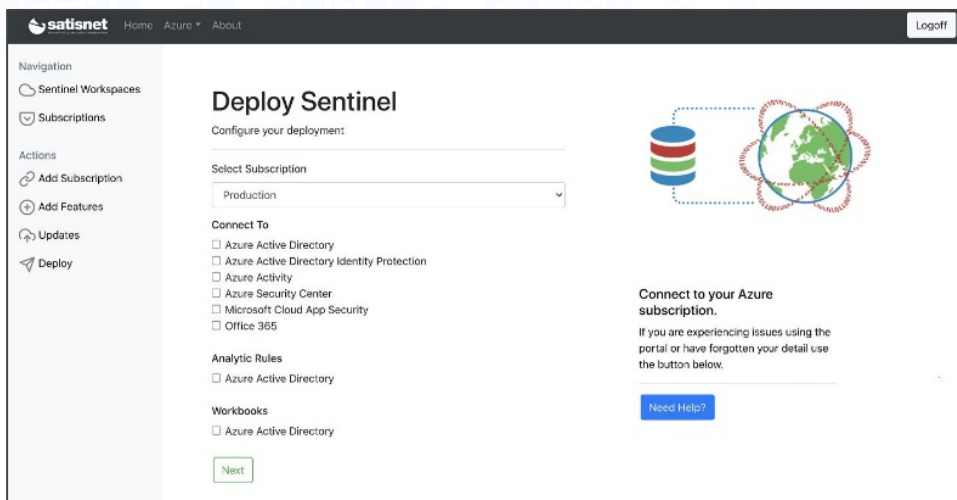

An easy-to-use portal automatically provisions Azure Sentinel for you with your chosen log sources, rules, dashboards and alerting options switched on — ready for you to carry out a PoV with your very own data.
