Azure Data Manager for Energy

The Data Challenge

Our customers are operating in a complex environment, with data arriving from many sources.

To realize the value of this data, it must be ingested, checked, contextualized and curated into **trusted data products** that can be easily **discovered** and **consumed** by Geoscientists, Engineers, Managers & Data Scientists.

Geoscientists & Engineers

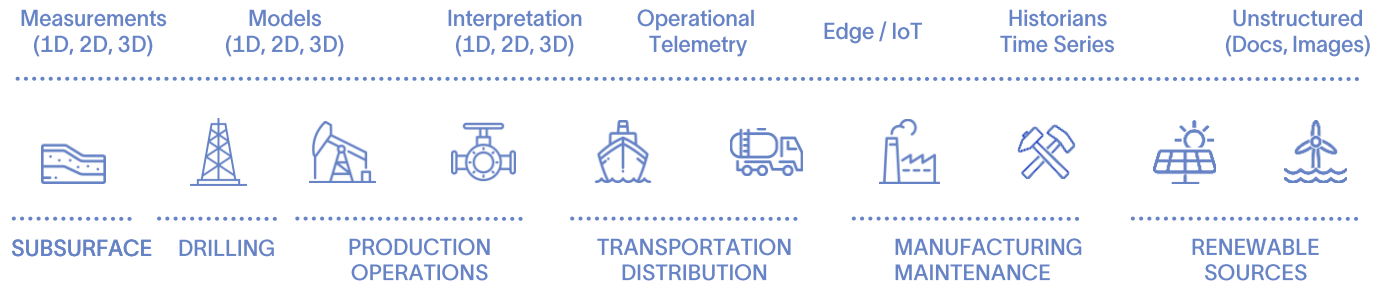

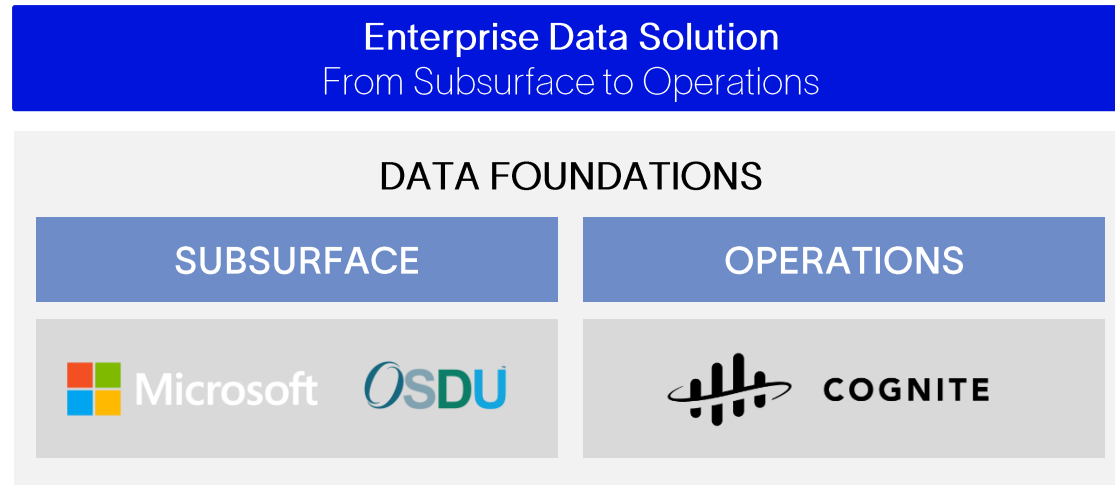

Managers & Analysts

Field Workers

AI Specialists

Unique Journey with Common Waypoints

In the past, data technology has been disconnected and proprietary, acting as an impediment to realizing data value.

Customers now demand a *radically modernized data environment* where they can **discover actionable insights** using their **trusted data products** and seamlessly integrate their workflows using their **choice of best algorithms and tools**.

Geoscientists
& Engineers

Managers &
Analysts

Field Workers

AI Specialists

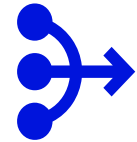

Discover and
Access Trusted
data

Act on insights
using full variety &
volume of data

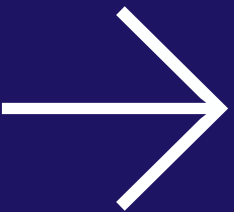

Standardized, open
algorithms & tools

Use trusted data
seamlessly integrated
with workflows

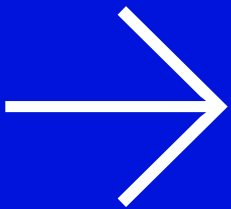

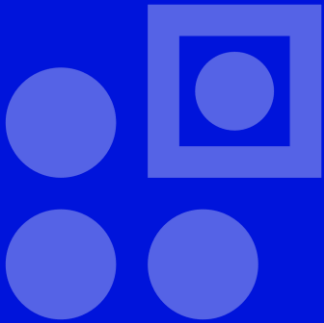

Ingest

Collect, *ingest*, and stage data easily from desktop or other file sources

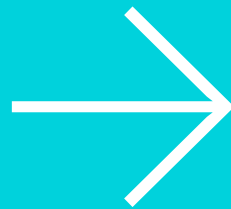

Curate

Curate and refine datasets into trusted data products, ready for consumption

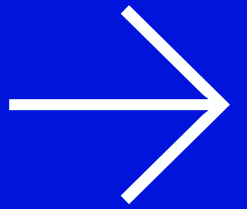

Discover

Discover ready to use data products with quick analysis and screening online

Consume

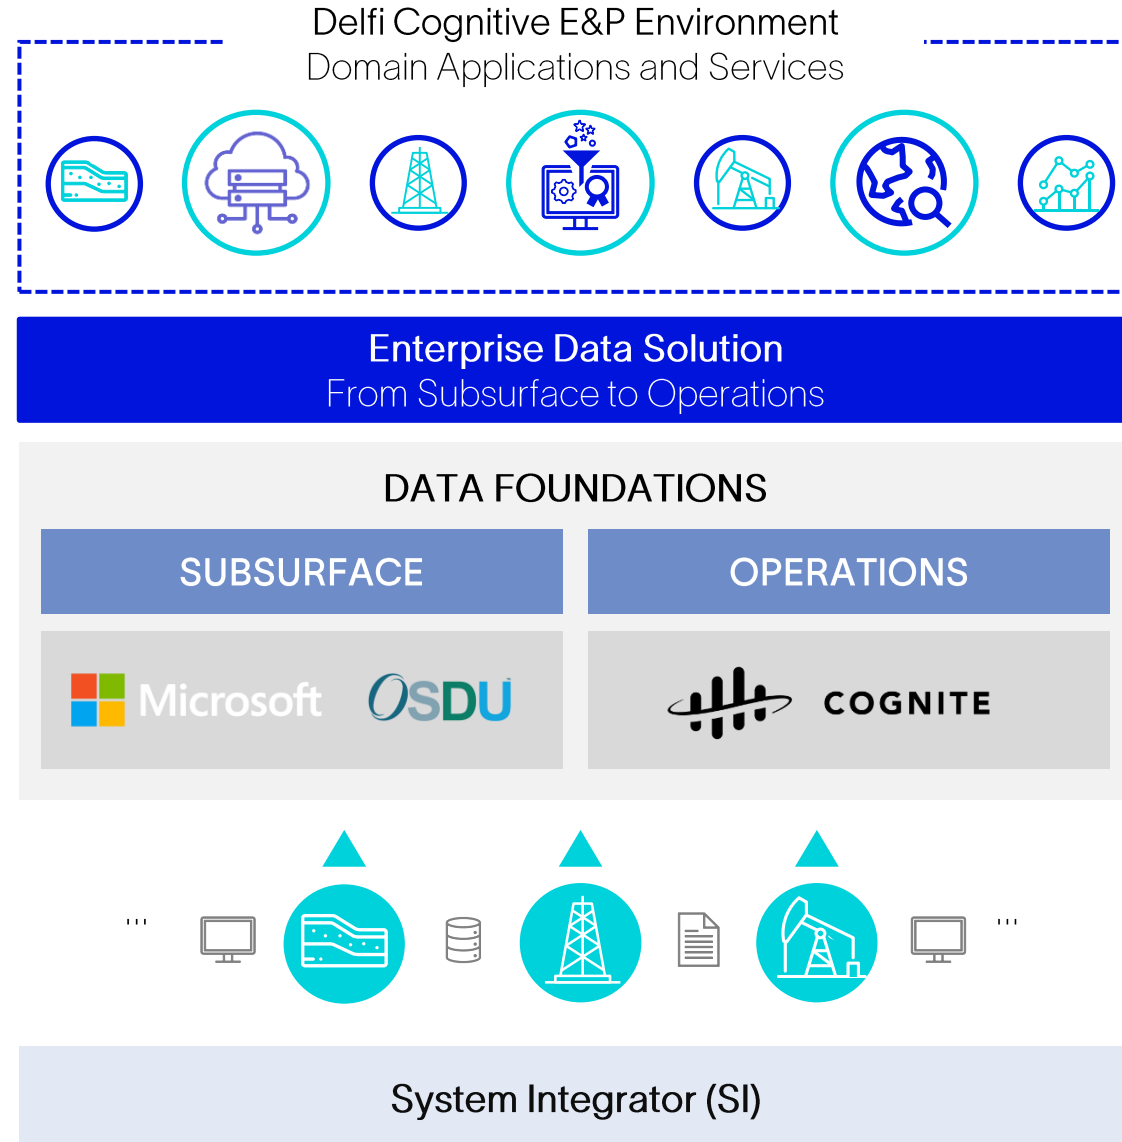

Consume trusted data products directly in your applications/workflows

Delivering Data Solutions at Scale

The SLB Enterprise Data Solution is a suite of data technologies that enable customers to deliver trusted data and AI powered insights directly to consumers.

It is built and delivered using a network of strong industry partnerships to achieve a scale beyond what any single supplier could achieve.

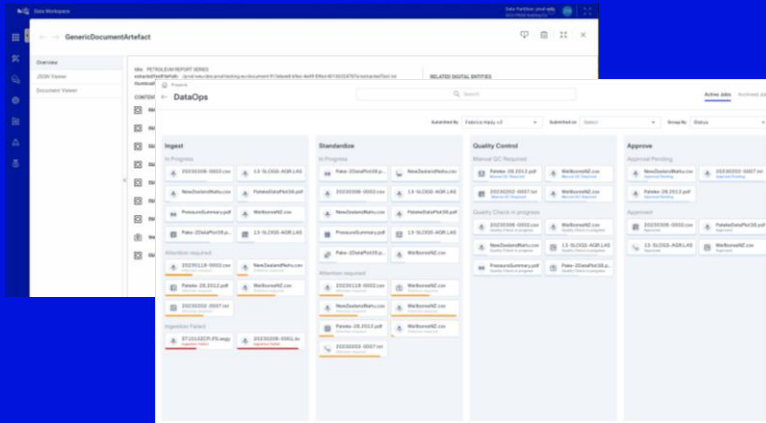

SLB Enterprise Data Solutions

Ingest - Curate - Discover - Consume

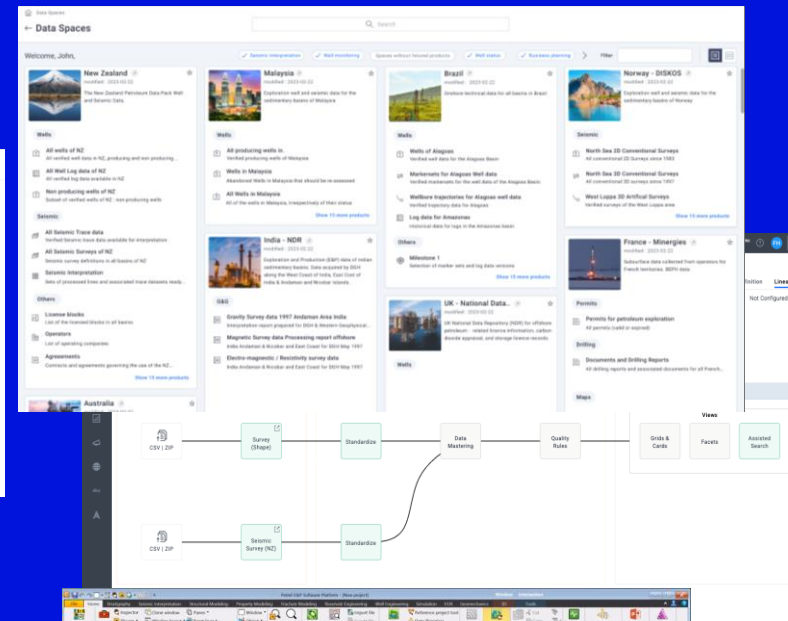

Ingest

Collect, ingest and stage data more easily from desktop or any file source

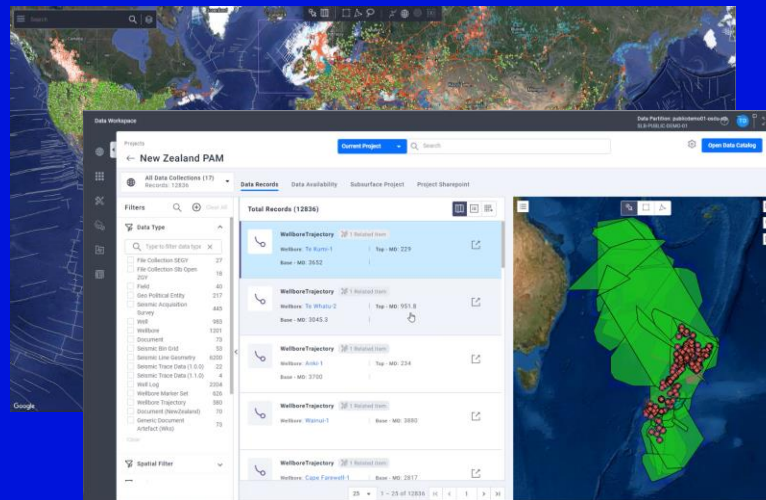

Curate

Accelerate curation and refinement of datasets into trusted data products

Discover

Ready to use datasets, quick data-asset analysis and screening

Consume

Use directly in your domain applications and workflows
