Want a robust Microsoft SharePoint intranet to facilitate your employees' working activities?

With 17-year experience in building Microsoft SharePoint collaboration solutions, ScienceSoft is here to help you implement an effective business-focused intranet based on Microsoft SharePoint.

We offer comprehensive Microsoft SharePoint intranet services from consulting to support and evolution of your business-centric intranet.

FOUR PILLARS OF BUSINESS INTRANETS WE DELIVER

Ultimate user experience

We keep in mind employees and their convenience when developing a business intranet and guarantee that every feature of your solution will serve your company's business purposes and your employees' needs.

Powerful data protection

We implement intranets in line with the established data security standards (e.g., GDPR, SOX, HIPAA) and your corporate policies, enable two-factor authentication, set user permissions, and leverage other Microsoft SharePoint security capabilities.

Business continuity

We keep in mind employees and their convenience when developing a business intranet and guarantee that every feature of your solution will serve your company's business purposes and your employees' needs.

Accessibility

We make your Microsoft SharePoint intranet flexible, dynamic and mobile to keep in step with your business pace and support employees working in any location and during flexible business hours.

Up to 30%

lower TCO

due to agile development, usage of proprietary components and tools, an optimal intranet feature set, and more

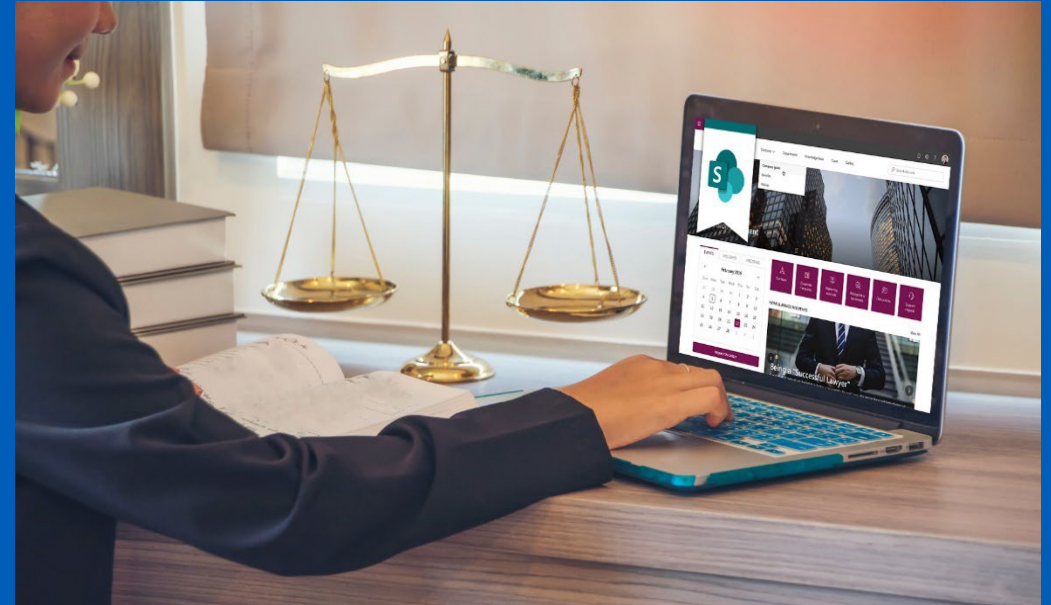

Up to 35%

reduced time on content search

due to advanced intranet search capabilities and content personalization

Customer Success: Microsoft SharePoint Intranet Development for a Law Firm

The Customer, a law firm located in the Gulf, wanted to replace their legacy intranet built on a third-party platform with a Microsoft SharePoint Online solution. Switching to the Microsoft SharePoint platform allowed the Customer to reduce the intranet maintenance costs and leverage diverse business and social features.

CHALLENGE

The Customer wanted to replace their costly-to-maintain legacy intranet built on a third-party platform with a more cost-effective solution based on Microsoft SharePoint Online, which should be bilingual to cater both to Arabic-speaking and English-speaking employees. For streamlined user adoption, the Customer required retaining the look and feel of a new intranet in line with the legacy one.

IMPLEMENTATION PROCESS HIGHLIGHTS

ScienceSoft's team implemented a bilingual Microsoft SharePoint Online intranet, which helped the Customer reduce intranet costs due to lower subscription costs, high scalability, out-of-the-box integration with Microsoft Office 365, and more.

The intranet offered nine department sites for each of the company's departments (e.g., Litigation, Compliance, Administration and Finance). ScienceSoft's team equipped the intranet with a range of out-of-the-box (e.g., People Picker, Highlighted Content) and custom (e.g., News, Events) web parts. Also, the team implemented custom branding in line with the Customer's brand book and design requirements in terms of color, fonts, text alignment, including, for example, a custom header with search, navigation, and a language switcher.

Customer Success: Financial Intranet Development for a European Advisory and Investment Company

The Customer, a European company that provides financial advisory and investment management services, wanted a business-oriented intranet based on Microsoft SharePoint. The project resulted in an attractive intranet with custom web parts that offered effective support of the company's business activities.

CHALLENGE

The company had a subscription to Microsoft SharePoint Online and wanted to implement a business-oriented intranet with a modern look and feel based on this platform with several custom web parts. What's more, the Customer wanted to remove all references to Microsoft SharePoint from the intranet.

IMPLEMENTATION PROCESS HIGHLIGHTS

ScienceSoft's team started the project by developing layouts of the master page and the home page of the intranet. In accordance with the Customer's requirements, they removed all the references to the Microsoft SharePoint platform (Microsoft Office 365, Share, Follow, and other icons) from the intranet's pages by hiding the relevant links.

ScienceSoft's team developed web parts aimed to give users quick and easy access to the following information: contacts, events, personalized financial information related to an employee's work like funds and assets under management, news, external sources and the most popular documents. Also, our team created a knowledge base that contained financial forms, onboarding guidelines, etc.
