Microsoft SharePoint Business Intranet: 10-Week Implementation

ABOUT SCIENCESOFT

ScienceSoft is an international IT services and software development company established in 1989. 17 years in Microsoft SharePoint consulting and development enable ScienceSoft to deliver effective cloud intranets to midsize and large companies in manufacturing, professional services, healthcare, telecoms, retail, education, and other industries.

Microsoft Solutions Partner

MICROSOFT SHAREPOINT BUSINESS INTRANET OPTIONS WE OFFER

An intranet with business-specific web parts and applications

We enrich your intranet with web parts that facilitate business activities (e.g., Events, Planner, People, Quick Links, Recent Documents), help your employees stay tuned for the latest industry news (the News web part) and financial data updates (Stock Quotes).

An intranet with custom business sites for departments and teams

We create custom sites with relevant content (e.g., documents, forms) and implement relevant integrations to facilitate the work of particular departments and teams. For instance, we can integrate the intranet with CRM (for a sales team), a billing system (for an accounting department), a case management tool (for a legal department), an asset management system (for a procurement department).

An intranet centered around specific business functionality

We build your intranet around contract management, learning and development, ticketing and help desk, asset management, knowledge management or other functionality. For example, if you need to focus on learning and development, the intranet solution will cover training enrollment, scheduling, knowledge assessment and certification. We can also implement a microtraining app to help your employees learn on the go.

WHAT OUR CUSTOMERS SAY

"ScienceSoft's team thoroughly analyzed our business needs and succeeded in meeting them all. The team leveraged Microsoft SharePoint capabilities to create an attractive, functional, and easy-to-use intranet that is available in two languages: Arabic and English. The solution is integrated with multiple third-party systems, incorporates both out-of-the-box and custom-built functionality, and automates required business flows."

– Tejas Gajjar, Chief Technology Officer at Meysan Partners

Microsoft SharePoint Business Intranet

Microsoft SharePoint business intranet is a corporate intranet solution that creates a **flexible business-centric environment** at the company level with effective personal digital workplaces and collaboration spaces for departments and teams.

WHY MICROSOFT SHAREPOINT BUSINESS INTRANET

Organized and easily accessible information

Establish a single source of the company's information (e.g., corporate news, project-related updates, knowledge base, employee profiles) and leverage full-text search and content personalization to find relevant information and people quickly.

Accelerated and centralized business processes

Automate routine tasks like document approval, employee recruiting, onboarding training, which will speed up business operations, boost overall employee productivity and reduce operational costs. Unite processes like document management and project management into one system, which will help you avoid the silo approach and increase the processes' efficiency.

Efficient digital workplace

Provide your employees with a personal digital workplace that contains all necessary Microsoft SharePoint and Microsoft Office 365 productivity and collaboration tools at their fingertips as well as relevant integrations with other Microsoft products or third-party tools. Thus, your employees won't lose time switching between the tools, which will improve their performance.

Improved communication and collaboration

Equip your employees with a range of tools (e.g., team sites, project sites, discussion boards, instant messaging) that allow colleagues to connect, share information and edit documents in real time. Due to its 24/7 access and availability from different devices and browsers, the Microsoft SharePoint business intranet streamlines collaboration even for geographically dispersed teams.

Top data security and compliance

Create a safe working environment for your employees that complies with your company's internal regulations and external regulations like GDPR, SOX, HIPAA, and GLBA. The Microsoft SharePoint business intranet enables user access control based on permissions and two-factor authentication, audit reporting, content retention and deletion policies.
