# The Development Velocity® Platform

A cloud-based, AI-powered infrastructure to execute cross-functional launch-readiness activities

Product Development Roadmap (PDR)

Foundational Workflow Automation Software in the Development Velocity® Platform

Specialized AI automates highly manual, siloed processes:

Determine tasks & start work faster
Use AI-generated plans by function & phase or customize

Coordinate & connect functional areas
Interdependent deliverables pre-linked for each task

Ensure tasks are completed on time
Step-by-step instructions to complete each task plus customizable templates for deliverables
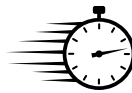

Retain institutional knowledge & memory
Holistic view of the development program & versioned deliverables for all cross-functional tasks

Remove Inefficiencies

Accelerate Strategic Decisions

Optimize Time

Reduce Costs

Increase Competitive Advantage

Launch Readiness Reimagined for the AI Era

AUTONOMOUS DELIVERY OF INTERDEPENDENT DELIVERABLES SAVED 75 DAYS (600 HOURS) OF TIME FOR ONE LAUNCH READINESS TEAM
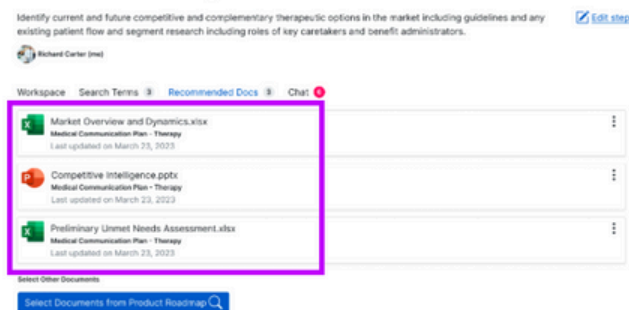

Objective: Quickly find & attain interdependent, cross-functional deliverables to inform individual books of work.

Challenge: SharePoint-like repositories require 1 hour+ to find the deliverable & ≈ 2 weeks if the deliverable was never put into the system.

Impact: ≈15 weeks lost (20 deliverables requiring 2 interdependencies (40 hours) & 7 interdependencies not in system (14 weeks)).

DV Platform's Workflow Automation Tool Removes Search Time for Deliverables

Interdependent deliverables proactively delivered to your work:

Deliverables also available on the product roadmap:
