

SCAI BOT

Decision Assistant for Real-time Insights into Supply Chain Performance

Market Need: How is my supply chain performing now?

Current stock levels & value of inventory?

....

Days of inventory?

Q-o-Q Growth?

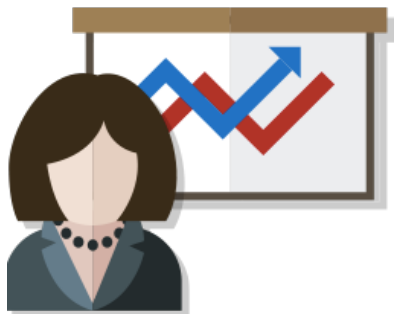

....

Top customers?

Inventory

Sales

Orders

Procurement

Outstanding value of orders?

....

Fill Rate?

Supplier Performance?

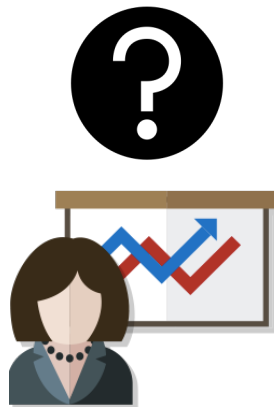

....

Supplier LTV?

Gaps in Today's Solutions...

Traditional BI Solutions

- ✗ Executive dashboards are
 - ✗ Complex and time consuming to understand
 - ✗ Pre-defined with limited ad-hoc capability
 - ✗ Not real-time
- ✗ Executives bank on dedicated BI analysts to get answers to ad-hoc queries real-time which is expensive

NLP Powered BOT Solutions

- ✗ Questionable relevance & accuracy of results as existing solutions convert English language statements into SQL queries
- ✗ Limited ability to compute KPIs as they are not domain-aware

Introducing SCAI BOT

NLP powered decision assistant for real-time insights into supply chain performance

Business queries in English

Supply Chain domain aware

Standalone modules for each functional area (e.g. Inventory, Orders)

Support for cross-functional business queries

Real-time business insights & KPIs

Simple & Intuitive UI
