

# Connected Schools.

One platform. Unlimited opportunity.

## Your NextGen end-to-end School Management Platform

Connected Schools is a single education platform, built on Microsoft, that connects all the dots - security, school management systems, administration, finance and HR, student and parent portals, learning and education tools, communication tools and AI enriched analytics. It upholds the fundamentals of knowledge: the safe free-flow of information, ideas, data and communication.

It provides Learners, Educators, Caregivers, Leaders and Administrators access to all the tools and modern, AI-enabled technologies they need, through a secure single-sign on.

It allows schools to choose their technology journey, with flexible and scalable modules that can easily integrate with existing applications or replace current tools - when they're ready.

## Solving School Challenges

### Too many tools

One platform.  
One kick off point.

### Data difficulties

One platform means everything talks to everything!  
Take your data insights to the next level with one data source that you own... and we can migrate your current data.

### The change is big

Let our change experts guide you through the process, including resources to help you lead your staff through the change.

### Complex licensing

Connected Schools utilises only 3 categories of licenses and a bespoke licensing calculator that we'll use when working with you to simplify things.

### But we love...

Got a tool you really don't want to lose?  
Connected Schools is modular in design and can integrate with other tools if needed.

## What sets us apart?

Microsoft Cloud for Education

UX first design

Data ownership

Modular design

Scalability and extensibility

Ecosystem rationalisation

Integration opportunities

# Connected Schools.

One platform. Unlimited opportunity.

## Teacher & Teaching

### Teacher Experience Place (TXP)
