

Azure for Developers: 4-hrs Workshop

This 4-hrs Workshop will show you the basics of Microsoft Azure and how to successfully implement a cloud platform in your company.

You can use Microsoft Azure to launch new applications in a fast and efficient way and also host your software and applications through a variety of available services.

This workshop was designed to give you a basic understanding of Microsoft Azure and enable you to successfully use the cloud platform.

This module is aimed at companies that offer software solutions (ISV), integrate systems or develop applications and users that are already working with Azure, or planning to do so in the future (executives, product managers, developers or infrastructure/software architects). We will address your individual challenges and use best practices to show you, how to successfully use Microsoft Azure.
