

Artificial Intelligence

AI Foundation

Establishing a robust AI infrastructure, optimizing operations, selecting technologies, integrating platforms, and fine-tuning models for scalable, data-driven solutions.

Services

AI Platform & AIOps Foundation

Establishing a robust AI platform and AIOps capabilities to enhance operational efficiency, scalability, and automated insights. This includes considering cloud adoption frameworks, best practices in architecture from leading hyperscalers, and product recommendations.

AI Technology and Vendor Selection Advisory

Offering strategic guidance to identify and select the best AI technologies and vendors, ensuring alignment with business goals and maximizing return on investment utilizing consultative toolkits, technology benchmarks, and advisory from hyperscalers and architects, along with our expert knowledge and experience in assessments with large organizations.

AI Products & Platforms Deployment and Integration

Expert deployment and seamless integration of AI products and platforms, ensuring optimal performance and scalability for data-driven solutions in analytics and AI consulting.

AI Systems Technical and Business Audit

Comprehensive technical and business audit of AI systems, identifying gaps and opportunities for scaling and integrating stand-alone created or isolated ML solutions into cohesive, efficient enterprise frameworks or platforms.

AI Foundation Models conception & Fine-Tuning

Conception and fine-tuning of AI foundation models (LLMs, VLMs), tailored to enhance performance and adaptability, ensuring robust and scalable solutions for diverse business applications.

Assets, Frameworks and Accelerators

- AI Architecture Platform Foundation Framework
- AI Cognitive Platform Foundation Framework
- AI Conversational RAG Framework
- LLMs Strategy Toolkit
