Microsoft Sentinel

Modernize security operations and focus on what matters most with a cloud-native SIEM, enriched by AI.

Microsoft Sentinel is a modern, cloud-native SIEM powered by AI, automation, and Microsoft's deep understanding of the threat landscape empowering defenders to detect, investigate and respond to threats - quickly and efficiently. With in-built security orchestration, automation, and response (SOAR) capabilities, user and entity behavior analytics (UEBA) and threat intelligence (TI), customers get a comprehensive solution that is both easy and powerful. Microsoft Sentinel aggregates security data from all sources, including users, applications, servers, and devices running on-premise or in the cloud. By eliminating on-premises infrastructure, it lowers costs by 44% compared to legacy SIEMs, as found by the commissioned Forrester Consulting Total Economic Impact™ of Microsoft Sentinel study. With Microsoft Sentinel defenders can hunt and resolve critical threats quickly and efficiently.

Monitor and track the activity and state of files protected by HaloCORE® or HaloCAD® with Microsoft Sentinel

Secude HaloCORE® and HaloCAD® for PLM solutions gather rich data regarding file import and export activities, including data classification, sensitivity ranking, encryption/decryption activities and the users that are performing these functions. Microsoft Sentinel helps maximize the ability for customers to mine this data to provide insights on day-to-day file protection activities, the systems that are affected and anomalies within these workflows that can identify potential cyber attacks.

Customer Benefits

- Monitor and alert on sensitive file protection activities performed by HaloCORE and/or HaloCAD within the enterprise.

- Collect HaloENGINE log data at Cloud scale and define custom retention periods.

- Leverage AI to provide unique ways to query HaloENGINE log data for new insights.

- Combine HaloENGINE logs with Microsoft service logs from Purview and Entra ID to gain more insights and extend reporting and alerting to file activity outside of the enterprise.
