Microsoft Purview Information Protection

Better protect your sensitive information—anytime, anywhere.

Microsoft Purview Information Protection helps customers protect their sensitive data – wherever it lives or travels. Microsoft Purview Information Protection enables you to discover, classify and label, protect and monitor sensitive information across a variety of locations including apps, devices, cloud services and on-premises repositories. You can customize your classification and labeling taxonomy to meet your specific needs and apply a range of protection actions to your data based on its sensitivity – such as encryption, access restrictions, or visual markings. Microsoft Purview Information Protection helps you meet your internal security goals and external compliance requirements.

Automatically label & protect any data export out of SAP using Microsoft Purview Information Protection

Customers using SAP as their core ERP system must ensure that any data that leaves SAP boundaries has the same security profile as within SAP in order to prevent data leaks. Based on the SAP business context / Authorization-based Access Control, only HaloCORE automatically applies appropriate labeling and protection defined in Microsoft Information Protection using MPIP SDK to the data and files downloaded from SAP.

In addition, HaloCORE blocks unauthorized reports, and helps generate fine-grained access policies. This solution supports SAP users who need data and files out of SAP applications by seamlessly extending Microsoft Information Protection capabilities to all kind of SAP environments.

Customer Benefits

- Transparency in SAP data download & export and complete audit trail even during 'firefighting' activities.

- Intelligence on invisible SAP application data streams.

- Securing reports and integration with SAP GRC and SIEM.

- Block through objects by using classification.

- Classification-based automated MPIP policy assignment for SAP downloads.
