

Your Platform for Rapid Agentive AI Enablement

SCALR AI is designed to introduce and build agentive capabilities in your cybersecurity environment. It powers common and custom use cases **using your own security data** and utilizes the AI models that you want and that **you host**. It supports hundreds of LLMs from Azure, Google, and Ollama. Users can select the best LLM for each of their specific needs, and you aren't left with worry about AI data leakage.

SCALR AI is for **upgrading your humans' output and skills** in using agentive AI. We want your people to eliminate time-consuming tasks, have AI shorten time-intensive tasks, and perform previously impossible tasks.

SCALR AI is different because it's not another AI public cloud SaaS. SCALR AI is **a choice for 'build' over 'buy'** because bought SaaS AI services are expensive, have limited extensibility, and have a short shelf life. SCALR AI is a runtime for you to completely customize unique innovations for your team and environment, differentiation your team from your competition.

SCALR AI supports rapid agent extensions from SRA-developed tools, custom python tools & agents (that SCALR AI can write for you), Logic Apps & Power Automate (low-code/no-code), and MCP servers (third party tooling support). There are options for every user, no matter how technically savvy, to build and extend custom capabilities to their personal workflows, or those of their team

Key Benefits

- Hit the ground running with our Agent accelerators who help solve common problems in vulnerability management, investigation enrichment, SOC quality assurance and reporting.
- Implementation includes training of your team for ideation and building of tools and agents to quickly extend the capability of your AI capabilities across your collection of tools, processes, and needs
- Your humans become 'chief of staff' of their own agents to amplify their own abilities.
- CISOs can show tangible AI gains when sitting among their peer executives.
- Leverage the cost-effective Azure AI Foundry and connect to other cloud services and partners.

Powered by Azure AI Foundry, SCALR AI offers a trusted, future-ready platform that enables organizations to confidently harness the power of AI for sustained innovation and growth.
