

# Azure Hybrid Cloud POC

# Developing hybrid cloud strategy

Companies today are turning to hybrid cloud strategies to reduce costs and increase operational efficiency. Using Microsoft® Azure Stack you can realize the power and simplicity of the public cloud combined with the security of an on-premise private cloud. With SEEPATH Consulting for Azure Hybrid Cloud, you can implement a right strategy for your hybrid cloud, with confidence.

With our deep azure expertise combined with full spectrum of azure managed services, get started now and move to Azure using our well architecture framework and methodologies to accelerate digital transformation while reducing risks. Move your workloads in a least risky path to the right target.

During this PoC engagement, SEEPATH SOLUTIONS will brief the client on Azure hybrid cloud services and engage in a requirements discovery workshop to identify and prioritize business and technical requirements. Based on the discovery session, we will discuss and document the proof of concept objectives

SEEPATH will setup an Azure tenant for the customer and configure the environment with performance and security best practice. Virtual networking will be configured in Azure and connected the customer's on-premises network. An Active Directory domain controller will be built for authentication.

## DELIVERABLES:

- 1.PoC Objectives
- 2.Azure tenant Setup
- 3.Virtual Networking with DC Configuration
- 4.Azure Site Recovery setup
- 5.Virtual server migration to Azure

## **ABOUT SEEPATH:**

Microsoft Gold Partner for over 20 years, Direct Microsoft CSP that offers secure and resilient cloud solutions to help business thrive and innovate in the cloud – REMOTE WORK, SECURITY, BUSINESS CONTINUITY, Migration and Modernization and Azure Managed Services.
