

# Seeq<sup>®</sup> INDUSTRIAL ENTERPRISE MONITORING<sup>™</sup>

## Increase reliability, production, quality - and do it sustainably

Sound familiar? Nearly every industrial operations organization faces this difficult mission - and with siloed teams, incomplete information, and limited visibility to historical actions and insights, achieving meaningful impact can feel out of reach. Simply put, today's complex industrial ecosystems need a better way to maximize operational potential by identifying, prioritizing, and scaling improvements.

## Enterprise visibility into operational performance and context - past and present

The Seeq Industrial Enterprise Suite enables you to unite your precious resources - the data, insights, historical activity and the context that only your subject matter experts can provide. The result - a comprehensive, automated view into operational performance that improves decision making and drives enterprise-wide continuous improvement.

## The Future of Monitoring - One Suite, All-Purpose

- **Power.** Seamlessly scales data, calculations, insights, and knowledge from every operational data source, and every subject matter expert across your operational ecosystem - *in real-time*
- **Simplicity.** Enables the creation intuitive workflows based on your needs to monitor, triage, investigate, and take action in a single unified solution
- **Versatility.** Delivers the flexibility and configurability to be the single solution for all of your monitoring programs, use cases, and teams

# Seeq VANTAGE

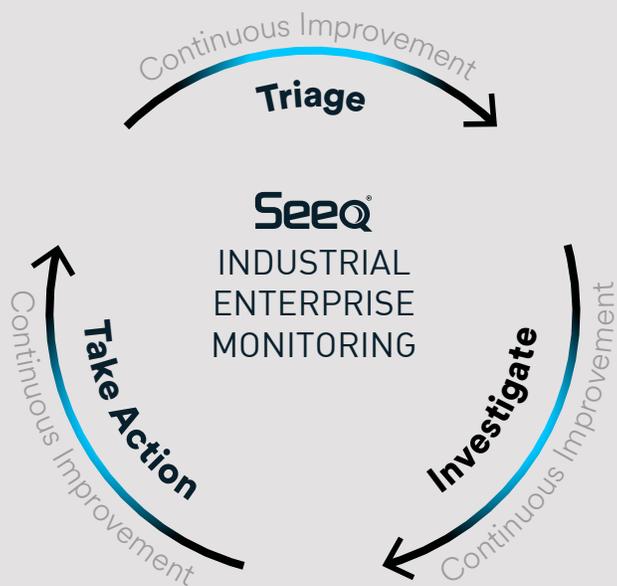

## The Seeq Vantage app is the heart of the Seeq IEM Suite, providing the following:

- Operationalized, automated condition based prioritization and decision support based on historical data, SME analysis and ongoing context capture
- High performance scaling - data, calculations and context from across the organization
- Intuitive and extensible to enable customizable workflows across use cases, teams, and users
- Leverages the Seeq Industrial Analytics & AI Suite for investigation, modeling, collaboration, and more
- Seamless integration into existing infrastructure

*“Industrial Enterprise Monitoring in Seeq has been a step change in our performance within our monitoring capability.”*

Process & Equipment Monitoring Lead

### Triage

- Condition-based alerts
- Continuously adaptive prioritization

### Investigate

- One-click deep dive into Seeq Workbench
- Access historical context and captured subject matter expertise

### Take Action

- Record insights and actions for future reference
- Suppress models to reduce noise
- Flag events for follow-up
- Refine models to improve ongoing monitoring
