Empower your workforce with generative AI: Seeq Industrial Analytics Platform on Azure

Achieve operational excellence and sustainability with industrial analytics and the Seeq AI Assistant

Today's industrial organizations are juggling many objectives as they try to make their operations more efficient, profitable, and sustainable. Data has always been critical to manufacturing excellence, and now organizations have an opportunity to augment their decision-making with advanced analytics and generative AI.
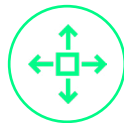

Do more, faster with Seeq analytics and AI

With the Seeq platform, your subject matter experts and data scientists can access the operational data they need to handle complex use cases and drive value. The Seeq AI Assistant, embedded across the platform, provides guidance to help engineers access subject matter expertise, get up to speed quickly, improve processes, and solve specific challenges.

Unlock insights and innovation

Close knowledge gaps

Capture domain expert knowledge and empower new engineers to hit the ground running.

Enhance decision-making

Drive greater production, quality, and yield with AI-driven insights.

Improve sustainability and compliance

Overcome operational hurdles and hit your sustainability and compliance goals faster.

Seeq leverages Azure Open AI to unite business and operational intelligence. With this IT-OT convergence, the end result is a better, more productive user experience across your entire enterprise.

British Sugar makes expert knowledge accessible to everyone with Seeq

BritishSugar

Challenge

British Sugar, the United Kingdom's sole producer of sugar from sugar beets, oversees a vast and complex production network. To keep things running smoothly, they needed a way to capture expert knowledge from every domain and make it accessible to anyone who might need it.

Solution

To address this challenge, British Sugar chose the Seeq Industrial Analytics Platform, augmented by the Seeq AI Assistant.

Results

Using Seeq, British Sugar captured over 100 years of subject matter expertise and embed it into their advanced analytics. With the help of Seeq AI Assistant, they were able to make all of this industry knowledge accessible 24/7, so users can make data-driven decisions in real time.

> "
> It takes at least a decade to develop an engineer into a subject matter expert...with Seeq and its AI capabilities, we are confident that we can cut that time in half.
