

### About us

Sela, an Azure Expert MSP and Microsoft Partner of the Year, is a market leader in Azure solutions since 2008, with the vision of bringing the most advanced knowledge in various technologies to the industry, with emphasis on practicality and quality. Sela has over 500 employees worldwide and is active in Israel, Canada, the USA, Singapore, and India, and supports more than 800 customers globally. We are promoting a unique End-to-End Managed Service Provider - 360 degrees solution, utilizing our expertise in IaaS, PaaS, and SaaS realms. Sela has an active part of Azure Accelerator Worldwide, support dozens of azure implementations worldwide in a variety of organizations, leading cloud webinars and events. We provide End-to-End solution using our group of senior consultants in different disciplines:

### CLOUD DEVELOPMENT ARCHITECTURE

Amongst Sela's cloud experts are - Software Development Architects, Infrastructure experts, DevOps, and Data experts (DB, BigData, and more). As Azure Expert Managed Service Provider, we offer our expertise to help structure the most suited cloud solution for you, whether it be PaaS or IaaS, which of the available platforms and services are best for your specific needs from a technical and business perspective (Database, Storage, Cache, Authentication, Queue and more) — planning a scalable system considering your vision and future prospected needs, all the above - encapsulating best practices.

### INFRASTRUCTURE AND NETWORK IN AZURE

Using Sela Cloud Solution Provider Program, your organization may leverage its IT services and extend far beyond current capabilities. Using various scenarios, you may choose to:

- Extend your network using a secure connection.
- Create a DR solution using Azure Sites Recovery.
- Create a testing environment for various servers.
- Transform your IT from an expenditure only unit to a revenue engine.

### DATA SOLUTIONS IN AZURE

- Storage – Single file repository (Scalable on demand)
- Azure Data Services- Azure data suite – store and process mass data using Databricks, Azure Data Factory, Managed SQL DB, and Azure Data Explorer.
- Document DB - NoSQL database, specifically designed to store single documents (any JSON representation)
- Machine Learning – Use of intrinsic statistical algorithms to automatically generate add-value information out of your existing data for reasons such as – prediction.

We will help select the best-suited solution for your business and security needs while maintaining a constant and constructive dialogue with your organizations' vision.
