

AvePoint Cloud Backup

A dynamic backup solution featuring cloud-to-cloud data protection

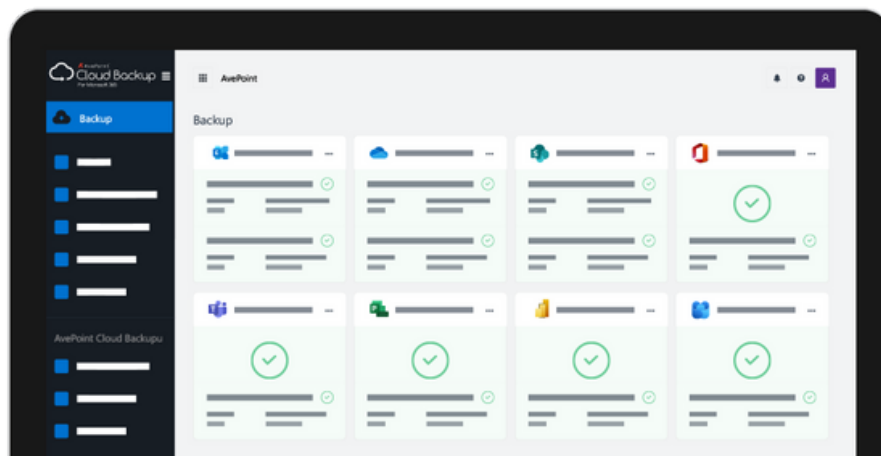

Sentinel Technologies is proud to offer AvePoint's Cloud Backup, a powerful cloud-to-cloud backup solution for Microsoft 365, Azure, and Dynamics 365. Your organization determines how much to recover, and when, using unlimited automated backups and secure storage options provided by AvePoint, Sentinel CloudSelect®, or your own cloud. On demand and granular, item-level restore across your applications ensures 24x7x365 access for your essential content or CRM data. ReCenter enables your users to automatically restore their lost data via self-service.

Comprehensive Backup – An unlimited backup service ready to handle any business-critical data through Microsoft 365, Azure, and Dynamics 365.

Recover in Minutes – Restore your data and applications quickly without the need for a phone call, scheduled window, or a site-level rollback

Worry-Free – Automated backups run 4x per day and retain all of your data. Unlimited backup subscriptions mean you have total flexibility and protection

Backups, Your Way – Select a scalable Azure storage under specific conditions. You also have the option to store your backup data in a private cloud, data center, or through Sentinel CloudSelect®

AvePoint Cloud Backup

Comprehensive Backup

- Near-zero configuration for daily backup plans. Target protection includes for up to four backups per day, automatically optimizing resources for the best throughput while avoiding throttling from SaaS vendors.
- Native business rules and filters make it simple to quickly select which content to back up.
- Backups can be placed in AvePoint's scalable Azure Storage, which requires minimal configuration. AWS may be available for certain sources. Your organization may also choose to store backups in a data center, Sentinel CloudSelect®, or another cloud instance. This solution includes support and compatibility for Microsoft Azure, and any data location accessible via SFTP, FTP, and S3.
- Satisfy compliance regulations and further protect your sensitive data from attacks by bringing your own encryption through Microsoft Azure Key Vault.
- Search and remove content or data as needed to meet GDPR and other governance rules.
- AvePoint's backup engine complies with all industry standards, including ISO certifications, to ensure the highest level of data protection.

Granular Restore

- On-demand, detailed recovery of your content, including all metadata and permissions, to any online or offline location you choose.
- In addition to restoring specific documents or versions, you can also perform security rollbacks to undo any accidental permissions changes.
- Restore content and conversations to other environments, workspaces, and sites to realign or recontextualize data as required.
- Export and restore selected backup content to file for offline access, enabling you to work anywhere at any time.
- "Search first" capability makes it easier to discover user content across workspaces for faster recovery.
- Self-service tool allows authorized users to easily locate and restore lost content.
- Monitor daily changes to your backups for rapid detection of unusual activity or potential ransomware attack so your team can begin investigating the issue and quickly restore from a safe backup point if necessary.

AvePoint Cloud Backup

Sentinel works with AvePoint to deliver a comprehensive solution that protects your valuable data across multiple Software-as-a-Service (SaaS) applications.
