

Fortis® Managed Security powered by Darktrace

Leverage AI to Stop Attacks!

Advance your protection now with Darktrace AI-powered services managed and monitored 24x7x365 by the Fortis® SOC.

As cyber attacks continue to grow in sophistication, you should be concerned about when (not if) you will be compromised. The common hacker playbook is to leverage stolen credentials, usually provided by an unknowing user, followed by the deployment of malware and lateral movement through your systems. During this compromise it is common for the bad actor to steal or encrypt data while holding your critical systems hostage with ransomware. Could you detect this activity today? Your organization needs a sophisticated and innovative managed security services solution from Darktrace and Fortis to detect and contain threats before they have the chance to escalate.

Darktrace Enterprise Immune System

Darktrace Cyber AI is the only technology in the world that autonomously fights ransomware without disrupting normal business operations

- Self-learning: neutralizes ransomware without relying on rules or signatures
- Identifies even novel and highly sophisticated strains of ransomware
- Autonomously responds to contain the threat in seconds
- Available on both network and email-based protection systems

Managed by Fortis®

Powered by AI, managed by Fortis - constant security protection and improvement from the world-class Fortis SOC

- Managed and optimized by Fortis - remain up to date and ready to respond
- Sentinel NOC - monitors and alerts on critical component performance and availability
- Fortis SOC - automated response is complemented by Sentinel's 24x7x365 team of skilled analysts
- Ongoing reporting and consultation - monthly check-ins and reporting from your Fortis security team to help consistently improve your security posture
- Available to monitor your entire security infrastructure with always-on managed detection and response services via Fortis ActiveDefense XDR
