

**ALWAYS LEADING**

Is public cloud part of your security strategy?

You've spent the past several years bolstering the security of your on-premises environment, but where does that leave your public cloud infrastructure?

Join us for a focused workshop on **Cloud-Native Security**

- Ideal for organizations who have an established public cloud environment
- Provides an overview on what cloud-native security means and its importance
- Help make sense of the acronym soup that surrounds public cloud security
- **Includes a complimentary public cloud security assessment of your environment**
 - Support for Azure
 - Includes asset visibility, compliance, and governance review
 - Passive threat detection including potential configuration issues
 - Public data security review (if accessible)
 - Identity and access management (IAM) security review
 - Executive summary of the analysis report with prioritized recommendations
- Duration: 1hr (Overview/Onboarding) + Follow-Up 1hr (Recommendations)
