

Windows Hello for Business is an authentication technology that allows users to sign into Windows devices, applications, and services using facial recognition, fingerprint identification, or a highly encrypted PIN instead of a traditional password. These options create an easier and more secure sign in process because it relies on biometric authentication. The PIN is bound to a single local device and is not transmitted over the internet. When paired with a Trusted Platform Module (TPM) chip, key material is protected from attackers and devices become locked after a certain number of incorrect PIN attempts.

Windows Hello for Business includes enterprise-grade security and management capabilities, including device attestation, certificate-based authentication, and conditional access policies. Policy settings can be deployed to devices to ensure they're secure and compliant with organizational requirements.

Scope of Work Details

Discover and Design:

- Review current infrastructure and verify prerequisites
- Review existing Entra ID and on-premises Active Directory configuration
- Evaluate the current Intune management solution configuration
- Analyze network topology and connectivity between on-premises and cloud
- Identify target user groups and devices for deployment
- Identify up to ten (10) users to be part of Pilot Group

Deploy/Implement:

- Ensure that Entra ID Connect is synchronizing to five customer-chosen user accounts and device identities between on-premises Active Directory and Entra ID.
- Register Windows devices with Entra ID so that those five customers chosen users can sign in to them using their Entra ID credentials.
- Configure Windows Hello for Business and configure the settings for Intune. This includes settings to configure biometric authentication.
- Issue certificates for Windows Hello for Business (if necessary) with the existing configured Cloud Kerberos Trust.
- Configure one authentication method that will be allowed for Windows Hello for Business. The customer's team will be responsible for providing the method (i.e. biometrics).
- Ensure multi-factor authentication is configured for Windows Hello for Business to increase the security of the authentication process.
- Troubleshooting issues that may arise during this deployment.
- Provide documentation for the knowledge transfer.
