

2 Day Power BI Fundamentals Private Training

Get your team up and running in two days with our fundamentals training. After attending the team will have the skills to transform data, solve modeling issues, produce production ready visualizations, and publish them to your Power BI Service. As part of the experience, a follow-on workshop can be scheduled to bring real world scenarios using your own data sources.

Course Overview:

- Data sourcing and transformation with Power Query Editor
- Data modeling fundamentals
- How to build visualizations
- Working with the Power BI Service

What's included:

All of our classes are offered remotely to work around your team's needs and schedules. We can accommodate all time zones including international, or breaking the class into half day sessions as needed. All students will receive a full copy of the materials used, all sample files needed, and completed workbooks for future review.

Additional services:

- **E-Learning tools:** After class your team can have access to web-based on-demand versions of the material. Available in 30, 90, or 180 day options, the E-Learning tools are an efficient way for students to review topics, practice at their own pace, and track their learning progress. The material in the online training is the same as the classroom material with demos and full audio/video guidance.
- **Workshops:** During the classroom training, students will be using vendor specific demo data. We know that this can't answer all of the questions your team might have with regard to your environment. As such, we at Senturus can provide half or full day Q&A mentoring workshops. These workshops can be tailored to your needs and include using either your data or sample data.
- **Support agreements:** At Senturus we understand that training doesn't end when a student leaves the classroom. As your team works with tools new questions and issues will arise. To help you deal with those situations, Senturus offers service contracts where you can have someone available to guide you. The contracts are available in customizable time segments for as much or little support you feel the team may need.

About Senturus:

For us, data and analytics are not an afterthought. That's not a small practice in our consultancy. It *is* our practice.

From the day we opened our doors in 2001, we have focused on delivering value through the blended application of technical expertise and business know-how. We bridge the gap that often exists between IT and business users.

Our instructors are a rare breed: real-world BI developers who are great teachers to boot. Their knowledge and genuine passion for analytics translates to a highly engaging learning experience that students rave about. Our instructors have trained over 10,000 students with more than 180,000 hours delivered.

We don't teach from (overly long, way too theoretical) vendor training material. Instead, we use proprietary material that focuses on immediately applicable, practical skills. We include time for hands-on exercises. Active participation accelerates deep understanding of the subject matter.

Pricing:

Pricing is customized based on the size of the class and your team's needs. Total cost may vary depending on additional support or options selected. Contact us directly and we will scope out your full needs and provide an appropriate quote.
