The Journey to a Modern Enterprise

The Journey to a Modern Enterprise is our proven approach to moving customers to Azure. **Azure Cloud Assessment** is an offering which is part of this approach, built from many years' experience of moving customers to the cloud.

What is Azure Cloud Assessment?

The Journey to a Modern Enterprise starts with “Discovery”.

Azure Cloud Assessment is a service provided by Servent to help accelerate and expedite your migration to Azure.

A challenge for many organisations on their cloud journey is lack of visibility into their current IT estates’ infrastructure, service components and dependencies.

Azure Cloud Assessment was born because of our transformation experiences with our customers. Time and time again we consistently see that those first steps to Azure is a challenging task for many organisations.

Our Approach

Discovery & Suitability

Discover and map entire IT estate with detailed inventory and consumption information

Right-sizing VM's for Azure migration

Discover compatibility issues

Dependency Mappings

Service and infrastructure level dependency mapping

Visibility into workloads interdependencies across on-premise, hybrid, and Azure platforms

Cloud Migration Strategy

Plan Move Groups

Identify first movers

Optimisation and modernisation opportunities

Why **Servent**

An agile partner who can mobilise in days and not months, with the skills and experience to deliver digital transformation for all businesses.

100% Azure Focused

As a leading UK Microsoft Partner and early adopter of Azure, we cover the full breadth of Azure services in depth, due to our 100% laser focus on the Azure platform.

15 Years' Experience

We've been with Azure since the beginning, with 15 years' experience we offer unparalleled expertise and help some of the biggest enterprises in their adoption of the Azure platform.

Enterprise Scale

Our extensive experience with some of the largest enterprise customers enables us to bring enterprise scale thinking to businesses of any size through our Enterprise Cloud approach.

Demystifying the cloud

We work with customers of all shapes and sizes across many industry verticals and help them better understand the Azure platform and how it can transform their Business

Benefits

Azure Cloud Assessment ensures that all workloads and data are identified, and their dependencies mapped in the most efficient manner possible. This is crucial in laying the foundation to making informed plans regarding migration suitability and to optimally target appropriate cloud platform offerings.

 Comprehensive Discovery

 Accurate Migration Planning

 Dependency Mapping

 Rapid Assessments

 In Depth Suitability Analysis

Discovery & Suitability

We undertake a baseline analysis of your IT estate with no prior knowledge required, to discover what you have, and how it is been used.

An inventory of all your workloads, their actual consumption, performance data and whether they are in a state ready for migration to Azure, or whether they perhaps require remediation prior to migration or are suitable for decommissioning.

Workloads and storage are right-sized and priced for optimal Azure VM profiles (for IaaS “lift and shift” options) and we ensure you’re not paying for cloud resources you do not require.

Review and identify optimisation potential on any existing Azure footprint and reduce cloud TCO.

Dependency Mappings

A key question for every migration is: how can I determine dependencies?

We have the capability and exclusive tools to help you understand relationships and dependencies across your datacenter and cloud environments.

We produce visualisations of these relationships between your service components and infrastructure. This makes it easier for you to accurately determine your migration plan for every application.

Options are available for either agentless or agent-based discovery, depending what best suits your company's requirements and current IT estate.

Cloud Migration Strategy

Start the planning process to establish your cloud migration strategy based on the detailed artifacts of the Discovery phase.

- Identify your first movers based on service dependencies, size, shared infrastructure, services, and cloud compatibility.
- Establish and quantify recommendations on optimisation and modernisation targets.
- Assess service-impact of Microsoft Server and SQL 2008 End-of-Life on your IT estate
