Modern Enterprise Acceleration with Azure Datapath

The Journey to a Cloud Scale Analytics Solution is our proven approach to moving and re-platforming customers to Azure. Azure Datapath is an offering which is part of this approach, built from many years' experience of moving customers to the cloud.

Why Servent

An agile partner who can mobilise in days and not months, with the skills and experience to deliver digital transformation for all businesses.

100% Azure Focused

As a leading UK Microsoft Partner and early adopter of Azure, we cover the full breadth of Azure services in depth, due to our 100% laser focus on the Azure platform.

15 Years' Experience

We've been with Azure since the beginning, with 15 years' experience we offer unparalleled expertise and help some of the biggest enterprises in their adoption of the Azure platform.

Enterprise Scale

Our extensive experience with some of the largest enterprise customers enables us to bring enterprise scale thinking to businesses of any size through our Enterprise Cloud approach.

Demystifying the cloud

We work with customers of all shapes and sizes across many industry verticals and help them better understand the Azure platform and how it can transform their Business

What is Azure Datapath?

Azure Datapath is a service provided by Servent to help accelerate your data journey to a cloud-scale analytics solution.

A challenge for many organisations on their cloud journey is how to efficiently assess, migrate, integrate and process large amounts of disparate data within Azure, and how to complete these activities in a secure and streamlined manner.

The Azure Datapath builds on top of the Microsoft Cloud Adoption Framework whilst applying our Well-Architected framework lens.

Our Approach

With Azure Datapath we adopt a four-phase approach.

Data Assessment

We assess your organisations overall data maturity, workload compatibility, security requirements and a platform modernisation plan.

Data Integration

The process of profiling and integrating source data with Azure in a secure, methodical and structured manner. Integration patterns are identified and re-platformed in Azure.

Data Processing

Your data is cleansed and curated into a unified format for downstream services to consume and modelled into an efficient format for maximum performance.

Workload Optimisation

Gain insights into your data and Azure infrastructure with the in-built monitoring features and optimising workloads. Interactive Power Bi dashboards for business insights.

Benefits

Azure Datapath offers numerous advantages that ensure a seamless and efficient cloud transition. The service provides low-cost, scalable storage solutions, optimising costs while accommodating growing data needs. Automation of data preparation processes streamlines workflows, reducing manual effort and increasing productivity. Additionally, Azure Datapath's interactive analytics dashboards, powered by Power BI, offer insightful visualisations that drive informed decision-making and business intelligence.

 Minimal downtime migrations

 Low-cost scalable storage

 Automate data preparation

 Interactive analytics dashboards

Why Azure Datapath?

Migration of data to Azure is perceived to be a very simple task. For simple workloads this may be the case, but for more complex workloads it's certainly not. As part of the Journey to a Cloud- scale analytics solution, we use many tools and processes to simplify migration activities.

Azure Datapath from Servent helps assess and migrate workloads to Azure. The Azure Datapath workflow migrates data from many different sources to the Azure platform in a secure, managed, end-to-end process.

Comprehensive Data Management

with Azure Datapath

Data Assessment & Compatibility

We assess your workloads and determine whether they are in state ready for migration to Azure, or whether they perhaps require remediation prior to migration.

Workload Discovery & Sizing

So, you don't know what workloads you have or what size they are? That's fine. We can help identify your virtual workloads and ensure that they are right-sized for Azure and ensure you're not paying for cloud resources you do not require.

Comprehensive Data Management

with Azure Datapath

Platform Modernisation Plan

Based on design and discovery sessions, we build a detailed plan to assist you in your journey to a cloud-scale analytics solution giving you visibility of the requirements and providing guidance.

Data Integration

So, you don't know what workloads you have or what size they are? That's fine. We can help identify your virtual workloads and ensure that they are right-sized for Azure and ensure you're not paying for cloud resources you do not require.

Comprehensive Data Management

with Azure Datapath

Data Processing

Data processing refers to the process of collecting, storing, manipulating, and analysing data.

We automate data processing for downstream consumers of data, removing technical debt from development teams.

Workload & Cost Optimisation

We optimise the performance and efficiency of workloads running in the Azure cloud platform post deployment. We ensure the right-sizing of resources so that they are appropriately sized to meet the workload demands, without over or under-provisioning. We focus on reducing the amount of money you spend on your Azure resources while still meeting your business and technical requirements.
