Who is Serverless Solutions?
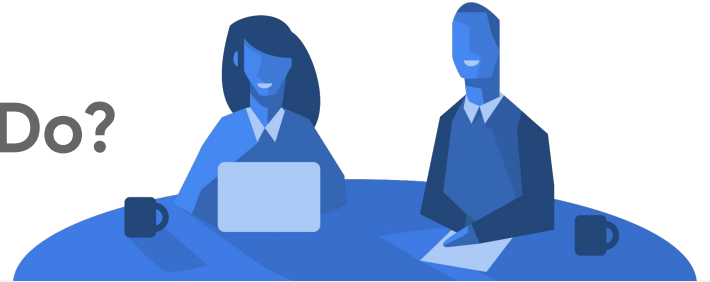

Serverless-Solutions is a Microsoft partner and professional services company, focused on the client's entire cloud journey, from Initiation, Implementation, Innovation through to Impact.

✓ We value relationships over transactions

✓ We apply data-centric strategies to solve specific business challenges

We do this by focusing on the fundamentals while keeping an eye on the future

⑊ Serverless Solutions

What Does Serverless Solutions Do?

- **Professional Services:** Serverless-Solutions provides professional cloud services that accelerate the time to value by leveraging cloud technologies and collaborating with organizations to drive innovations that impacts real business outcomes.

- **Cloud Partner (VAR):** Once a client is live on the cloud, Serverless-Solutions enriches the cloud experience through quarterly reviews that mitigates risk, managed services that make being in the cloud easier to manage and bi-annual innovation workshops that help identify opportunities to leverage the power of cloud technologies…at no additional cost!

Serverless Solutions

What does serverless really mean?

It is about optimizing, not just running your business, on the most secure and scalable cloud platform available

It is about moving the management and deployment of technology to your cloud provider so you can focus on your mission instead of your infrastructure

It is about reducing technical debt by modernizing applications, reducing the lines of code supported and applying modern architecture principles

It is about paying only for what you consume. Why pay for infrastructure that is idle more than it is used
