

Dell DevSecOps Implementation Services on Microsoft Azure

Implementing security practices into DevOps processes is increasingly becoming critical to identify and proactively address vulnerabilities within DevOps pipelines.

The DevSecOps Implementation Services on Azure is designed to accelerate customer success in moving from DevOps to DevSecOps using Azure and GitHub features. Acceleration is achieved both by providing deep subject matter expertise from Dell and through pairing opportunities for Customer team members to learn the necessary skills, practices, and tools on-the-job. Together, the joint Dell and customer team will implement security tools, techniques, and processes into existing DevOps pipelines.

Our team of experts will enable you to deliver the outcomes you need:

- Integrate security tools into pipeline and use secure coding practices
- Employ automation
- Adopt Security as a code for improved, proactive security
- Make accelerated security vulnerability patching, a repeatable and adaptive process
- Security uniformity and Self-service functions
- AI-backed threat analysis
