

Managed Detection and Response with Microsoft (MDR) – Proactive TDC Services

Provides seasoned, credentialed cybersecurity expertise to deploy and configure Microsoft Sentinel and M365 Defender ecosystem with Dell Technology Services expertise in preparation for MDR Services. Addresses top SecOps concerns with a fully-managed, 360° solution comprised of cutting-edge services to reduce threat exposure, detect and respond to incidents, and recover your environment in the event of a breach.

Microsoft Sentinel and Microsoft 365 Defender's cross-product layer augments the individual service components to:

- Help protect against attacks and coordinate defensive responses across the services through signal sharing and automated actions.
- Narrate the full story of the attack across product alerts, behaviors, and context for security teams by joining data on alerts, suspicious events, and impacted assets to 'incidents'.
- Automate response to compromise by triggering self-healing for impacted assets through automated remediation.
- Enable security teams to perform detailed and effective threat hunting across endpoint and application data.

Prepare

Team with the Customer to discover architecture requirements and deploy Microsoft 365 Defender Suite aligned to stakeholder direction, environment considerations, access permissions, and Customer-direct onboarding priorities.

Configure

Dell experts work closely with Customer team to configure the Microsoft Sentinel and Microsoft 365 Defender portal to validate licensing, prepare to onboard devices and services, setup permissions, and establish role-based policies.

Onboard

Onboard devices and services using automated endpoint system or supported onboarding tools based on the endpoint types and policies.

Knowledge Transfer

Conduct knowledge transfer with the Customer on essential roles and responsibilities, troubleshooting, incident investigations, and more.
