Africa Case Study

We are live and contracted to go live in 14 African countries to reach 100,000s of children.

- Began operating in Africa in Oct 2023 with a global nonprofit in Ghana, Sierra Leone, Liberia, and Nigeria screening over 5,000 children in the first 6 months.
- The nonprofit was able to screen 3x more children (from 120 to 360 children) in the same amount of time it took them to use paper-based processes, reducing processing time from 25 minutes to just 8 minutes.
- Volunteer training was reduced from hours to just 5-10 minutes. Feedback is that ShareMy.Health is user-friendly and intuitive.
- Eliminated dependency on paper records, enhancing data privacy compliance and alignment with GDPR best-practices.

funding models

work together, raise together

IMPLEMENTING We jointly apply to Donors PARTNER for the funds we need for DONORS joint programs. joint programs Since this can take time, ****** ShareMy.Health's development **SMH** team can often raise the initial DONORS funds within 60-90 days. my;

let's get together.
