

# Azure Stack HCI Deployment & Migration Services

Expert Migration for Superior On-Premesis  
Cloud Integration

Our team offers comprehensive, white-glove services to ensure a seamless transition to Azure Stack HCI, handling everything from unboxing and racking equipment to advanced engineering and integration. We also manage data and virtual machine migrations, backed by thorough QA testing, to deliver a fully operational and optimized infrastructure. By leveraging SHI's Data Center Infrastructure Services Team, your organization will have access to some of the most talented Data Center Architects and Consultants in the industry. See how you and your organization can benefit from our Azure Stack HCI Deployment & Migration Services.

## Use Cases

Common scenarios for Azure Stack HCI Deployment & Migration Services include:

- Basic standups
- Greenfield and brownfield best-practice deployments
- Large-scale workload migrations
- Onsite and remote installation
- Advanced deployments and configurations

## Key Activities

- Discovery & design
- Onsite installation
- Configuration & Integration
- Workload migrations
- Physical and logical Quality Assurance Testing

## Key Benefits

Our Azure Stack HCI Deployment & Migration Services will help your organization achieve a seamless and efficient transition to a modern infrastructure.

- Delivering a fully operational and optimized hyperconverged infrastructure
- Ensuring minimal downtime during migration with meticulous planning and execution
- Providing comprehensive physical and logical QA testing for reliability
- Hyperconverged improves the scalability and flexibility of your IT environment
- Providing Azure services on-premises for your private cloud
