Electrical Engineering Firm Migrates to Azure

CUSTOMER PROFILE:

Engineering firm with over 500 employees needed assistance with Cloud Cost Assessment and Migration deployment plan

CHALLENGE

Customer is an established nation-wide Electrical Engineering firm that has expanded to multiple locations. With this additional growth, the customer wanted to utilize cloud computing and approached SHI to assess and migrate their current environment to Azure.

SOLUTION

Customer was already leveraging Azure but needed additional servers migrated into their cloud environment. They lacked internal resource availability and expertise. Customer also needed an assessment of their complete environment, assistance with identifying any migration concerns and mitigation plan as well as understanding of long-term cost implications.

RESULTS

SHI leveraged an agent-less assessment tool to capture the full environment which provided instance mapping, migration service estimates, post-migration Azure service cost estimates with utilizing Hybrid and Reserved Instance pricing. SHI also performed the migration of the remaining services leveraging our Rapid Server Migration methodology.
