

SecOps<sup>®</sup> Solution

Identify and prioritize security risks in seconds

# Pain Points

## Vulnerability Management

Enterprises have to use different tools for vulnerability detection, manually prioritize and remediate them. This manual process is not only error-prone but has a significantly longer lead time.

## Misconfiguration

Misconfigurations in Enterprise Applications and infrastructure are among the key root causes for confidential data leak and theft.

## Forecasting Attacks

Identifying the chain of events that can lead to a bigger attack on the system. The traditional security solutions are ineffective and constant manual intervention is required.

# Introducing SecOps® Solution

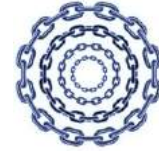

## 100% Agent-less Visibility

No need to configure a new software at your end. An easy-to-use, light, universal web application supporting stand-alone servers as well as multi-cloud stack.

## Context-Based Risk Analysis and Patching Technology\*

Prioritize top 1% vulnerabilities having the maximum risk for your business uses our proprietary context-based risk identification technology

## Identifying Cyber- Attack Chain

Scanning of the complete enterprise tech-stack and detection of cyberattack chain using deep neural networks and rule engines

***\*Provisional patent application in process***

# Capabilities

## Cloud Security

Identify, prioritize and patch vulnerabilities and misconfigurations in your entire cloud environment.

## Container Security

Discover, track and continuously secure docker containers, kubernetes pods and microservices

## Audit & Compliance

Assess security configurations of your workload and use our proprietary compliance patching technology to fix the gaps for PCI-DSS, HIPAA & more.

## Zero Setup

Get up and running in seconds. Connect to SecOps platform and secure your enterprise infrastructure and applications instantly

## Vulnerability Assessment

Continuous vulnerability scan across clouds and workloads. Context-based prioritization based on exposure and impact

## Mobile App Security

Automated advanced security assessment of mobile applications - Android, iOS, Windows

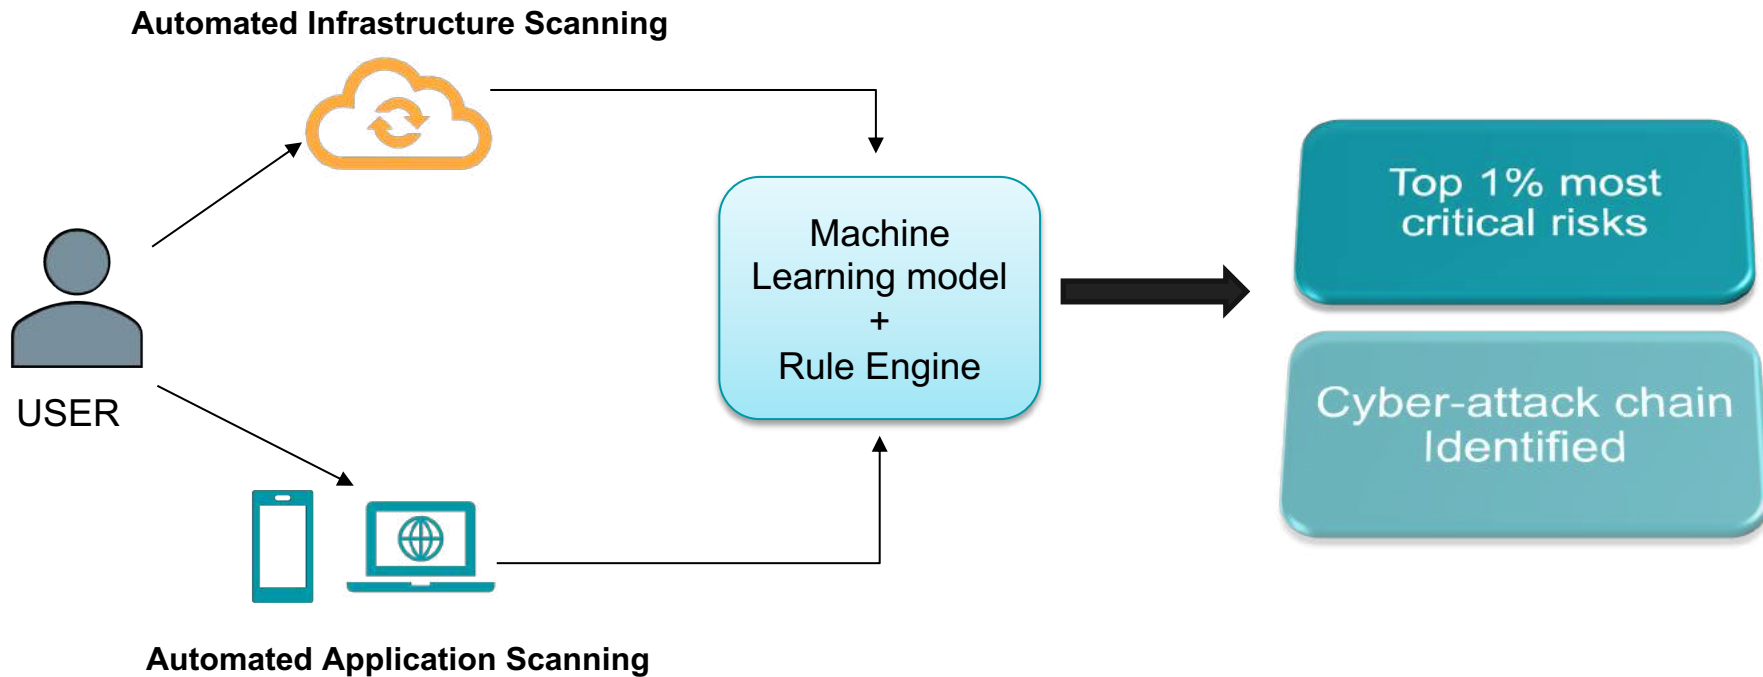

## Web Application Security

Detect, patch security gaps in static websites, complex web apps and APIs.

## Reduced TCO

Value for Money due to scalability and affordability. Reduces total cost of ownership, apt for small, medium and large enterprise

# Product Flow
