

Migrate Exchange to Office 365

This tool can help to migrate Exchange to Office 365 effortlessly. It allows users to migrate single or multiple mailboxes into the given target and provides many advanced features to make the migration process easy for everyone. Even non-technical users can migrate Exchange to Office 365 without any assistance and glitch.

Office 365 to Office 365

This professional Exchange to Office 365 migration utility allows users to migrate Office 365 to Office 365 without extra effort. During the Office 365 to Office 365 migration, this software efficiently keeps the folder hierarchy. Besides this, the software doesn't alter the original properties of the mailboxes. It also provides a folder mapping option to migrate data from one Office 365 folder to another folder.

Migrate Public Folder & Archive mailboxes

Shoviv Exchange to Office 365 migration tool also allows users to migrate public folders and archive Mailboxes of Live Exchange/ Office 365 to another Live Exchange/ Office 365 Public folder and archive mailboxes. The Public folder and Archive mailbox migration is a handy feature rarely provided by other tools.

Migrate to Outlook PST

Besides Exchange to Office 365 migration, the software allows migrating Exchange to PST format. Users can migrate Exchange to PST as a backup of Exchange data; easy to port and access. This software provides a split feature while migrating to PST. The split feature allows users to split the resultant PST file into multiple small-size PST files.

Advance Options

This professional utility provides email translation and folder mapping features. Email translation feature comes in handy to change the canonical emails with the SMTP address. The Folder mapping feature allows users to migrate data from one folder to another folder. Users can use CSV files for folder mapping and email translation.

Incremental Export

This software provides an Incremental Export option that comes in handy to prevent duplicity and resume interrupted process. For this, users have to uncheck the **Export all items** option, and the software will filter out already migrated items.

Note: For Incremental Export, users have to select the same target folder and do the folder mapping the same as the last process.

It has many more feature.
