

## Build and Manage Your Azure Data Centers Quickly and Easily

NTT DATA Accelerator for Microsoft Azure

Gold  
Microsoft  
Partner

### Benefits:

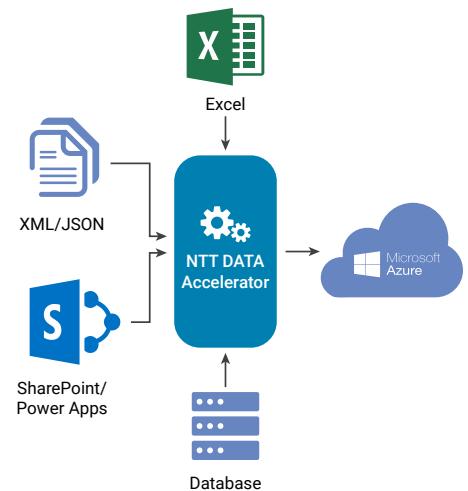

- Able to build new Azure data centers quickly and easily
- Repeatable to save you time and resources
- Easy to use by system administrators
- Compatible with multiple platforms and user interfaces
- Capable of running on an existing Azure data center to generate config files and reports

Migrating your data to Microsoft Azure and rapidly building, managing and deploying robust scalable cloud applications across a massive global network is essential to executing new business strategies with less time and resources. Azure offers unmatched hybrid capabilities that let you leverage data facilities on-premises and in the cloud. With its flexible range of features, you can quickly scale up or down without the hassles of acquiring and maintaining any physical data infrastructure — all while ensuring industry-leading security and compliance coverage.

However, building an Azure landing zone for your infrastructure-as-a-service solutions can be complex, time-consuming, and error-prone with a lot of repetition involved. Fast-track your Azure strategy today with the NTT DATA Accelerator for Microsoft Azure. It swiftly deploys Azure components using a consistent, data-driven build process that reduces errors and increases standards conformity.

The Accelerator enables you to create entirely new data centers quickly with a set of pre-configured templates that can be audited and modified as needed. Save time and resources with this easy-to-use, repeatable solution that lets you build complete landing zones per the best practices defined in Microsoft's Cloud Adoption Framework — without having to hire multiple Azure architects.

No matter what user interface your team prefers, the Accelerator can be controlled with various platforms, including Excel, SharePoint and Power Apps.

### Your trusted cloud migration partner

NTT DATA is ready to be your partner for all your cloud migration and business strategy needs.

We're a member of Microsoft's elite Azure Expert MSP program, exclusively for expert member partners skilled at managing complex global cloud environments. Our team also has an advanced specialization designation for SAP on Azure.
