

EXPERIENCE THE POWER OF BUSINESS INTELLIGENCE IN FIVE DAYS

Business and technology decision-makers are increasingly looking for Business Intelligence (BI) and data analytics solutions to satisfy their need for improved BI capabilities quickly and cost-effectively. The volume and variety of new data sources is rapidly increasing and so is the demand for valuable insights into this data.

A cultural shift from sifting through rows of raw data looking for insights to self-serve analysis, where data visuals provide more powerful information is required to create business value for organizations.

SOLUTION

Power BI is a Software as a Service (SaaS) Microsoft product based on an agile and community-driven delivery model. With new features added regularly, organizations can transform visual data into meaningful and useful information to gain valuable insights. Sierra Systems' business analytics services assist you in achieving maximum business benefits quickly and cost-effectively in five days.

Microsoft's Power BI

Benefits

- Access data quickly and with ease.
- Gain insights into your business.
- Get information from any device.
- Collaborate across your organization.
- Transform data into visual content.

DAY 1

- Identify stakeholders
- Select business processes (two or less)
- Select limited data set (6-12 tables from one or two data sources)
- Determine the version of Power BI to apply
- Create conceptual model of dimension and measures

DAY 2

- Shape, transform, and clean data as required
- Build page one of report

DAY 3

- Shape, transform, and clean data as required
- Build page two of report

DAY 4

- If the Power BI service (cloud) is allowed, create a dashboard based on certain widgets from the three reports
- Build page three of report

DAY 5

- Share the dashboard and reports with stakeholders
- Review how to access and use dashboard and reports
- Explore solutions and features
- Discuss next steps
