

The Global Secure Access Engagement

Identify network access security risks in your organizational environment

Partner-led engagement highlights

-  Understand the risks of *uncontrolled network access*
-  Learn about risks posed by unsecured remote user access
-  Assess your environment against key network access security standards
-  Receive an analysis and report on findings and associated risks
-  Learn about tools and services that can help mitigate risks
-  Explore recommendations and next steps

73%+ of organizations experienced a network security incident due to inadequate access controls in the past year

In today's hybrid work environment, users connect from anywhere, on any device, making secure network access a critical challenge. As organizations extend their digital perimeter beyond the corporate firewall, traditional VPN-based security models struggle to keep pace. With the rapid growth of cloud apps and remote work, identity-centric Zero Trust network access has become essential. Yet many organizations still rely on legacy perimeter-based access, leaving critical resources exposed. It's time to take control and secure your network with a modern Security Service Edge (SSE) approach.

Intelligently control and secure access to your network resources

Securing access to the internet, SaaS apps, and private applications is critical to protecting company assets and ensuring a productive, safe workforce. The **Global Secure Access Engagement** gives you the insights needed to understand network access security risks in your organization. Whether you need a full end-to-end implementation or simply want to configure Global Secure Access within your existing Microsoft license, Signal Alliance Consulting's certified experts are ready to guide and deliver the solution for you.

As your workforce becomes more distributed and cloud-dependent, having an integrated Zero Trust approach that converges identity and network access controls is more important than ever.

By participating in this engagement, our experts will work with you to:

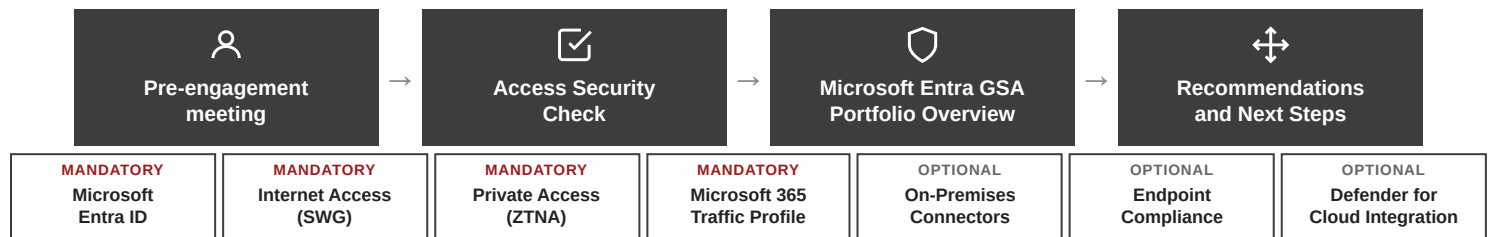

Document your objectives and strategy around secure access and Zero Trust.

Show how to detect, investigate, and act on network access security risks.

Demonstrate ways to accelerate your ZTNA journey with Microsoft Entra technologies.

Provide actionable next steps and implement or configure the solution in your environment.

Global Secure Access Engagement

What to expect

By the end of this engagement, experts in Microsoft security will provide you with a:

-  An Access Security Check report that includes findings and insights from the automated discovery process.
-  A list of recommendations and actionable next steps that will help mitigate the identified risks.
-  Clear look into Microsoft's approach to Zero Trust network access and Security Service Edge.
-  Optional Microsoft Entra Tenant Assessment report with suggestions and top key improvement actions.
-  Set of long-term recommendations on your Zero Trust strategy, with key initiatives and tactical next steps.
-  Full implementation or configuration of Global Secure Access, whether starting fresh or already licensed.

Signal Alliance Consulting, a subsidiary of Signal Alliance Technology Holding, is a leading enterprise technology firm driving digital transformation in both private and public sectors. We specialize in leveraging modern technologies to enhance productivity, innovation, and growth. Our core areas include Modern Work, Cybersecurity, Cloud and Data Analytics, Custom Applications, and Managed Services, all tailored to meet the demands of today's digital world. By partnering with global leaders like Microsoft, Oracle, and IBM, we deliver innovative solutions that optimize operations, improve customer experiences, and ensure sustainable growth.
