

How the Global Secure Access Engagement can help

Understand Zero Trust Network Access (ZTNA) risks

Discuss and understand the risks of unprotected network access and how Global Secure Access mitigates them.

Understand the risks unsecured remote access may impose

Learn how to identify and respond to remote access vulnerabilities and risky user behaviors that expose the organization.

Assess the customer's Microsoft Entra environment

Assess against a set of controls for key regulations and standards for network security and identity governance.

Analyze and report

Analyze the findings and associated network access security risks. Provide insight and highlight those that are most impactful.

Learn about tools and services that can mitigate risks

How can Microsoft Entra Global Secure Access help and what does this mean for the end user.

Recommendations, next steps and implementation

Provide recommendations, define next steps, and implement or configure GSA whether starting fresh or already licensed.

Engagement Objectives

Global Secure Access Engagement

After the engagement, you'll...

Have a Global Secure Access strategy documentation for your teams and stakeholders.

Better understand, prioritize, and mitigate potential network access threats.

Accelerate your Zero Trust network security journey with Microsoft.

Have defined next steps based on your needs and objectives.

Have Global Secure Access fully implemented or configured in your environment, whether you need end-to-end deployment or just configuration within your existing Microsoft license.
