Signzy's Comprehensive Solution for API Banking Ecosystem

Our API Orchestrator empowers users to optimize their API workflows.

- It integrates APIs, flows, and upstreams for efficient data synchronization, offering features like **verification checkpoints and webhooks integration.**
- It supports import/export, HTTP plugins, markdown documentation generation, and hybrid deployment options for added versatility, **making it the ultimate tool for agile and effective API Banking Ecosystem.**

Stay Compliant with Signzy

- Our fraud risk management feature provides **continuous real-time surveillance, promptly flagging suspicious activity** and discreetly **conducting KYC checks** for medium-risk transactions, enhancing security without operational interruptions.
- For high-risk transactions, our system allows you to swiftly block or initiate **Suspicious Activity Reports (SARs)** based on factors like customer type, products, delivery channels, and locations, demonstrating our dedication to safeguarding your financial integrity.

SIGNZY Achieves SOC2 Type 2 Certification, Elevating KYC and Onboarding Verification!

What does this mean for you?

- Elevated trust in Signzy's KYC and onboarding verification solutions
- Strengthened security measures to fortify your data protection
- Peace of mind, knowing your information is in the safest hands

A woman with short brown hair, wearing a white button-down shirt, is smiling and looking at her smartphone. She is positioned on the left side of the image, with a large, abstract orange wireframe graphic behind her.
