The Company

Sikur is defining the future of secure communication, operating globally, through its offices and Distributors in Brazil, the United States, Europe, the Middle East, and Japan. Sikur works alongside governments and corporations that believe security is fundamental to the integrity of their work. We believe that security is not only about platforms and digital systems but is a mindset that surrounds every aspect of a business.

Sikur Lab is the brand new Sikur innovation and research laboratory located in Sophia Antipolis, France. Sikur is now a member of the Digital Security sector at Sophia Antipolis SCS Cluster (Secure Communicating Solutions), which is a Leading European Ecosystem in microelectronics, internet of things, digital security, artificial intelligence and big data. We established our research lab in this location because it is a fast-growing hub in advanced technologies. Now digitalization is the core for everything related to human development, and France is occupying a central role as we have noticed in the last few years. This is happening in parallel with Sikur's development as a company, and we want to take part on this, at the same quick pace.

Global Exposure

SIKUR: "ONE OF THE MOST
EXCITING PHONES AND
GADGETS FROM MWC 2018"

According to Gartner, SIKUR is a vendor that has relevant solutions to this technological space

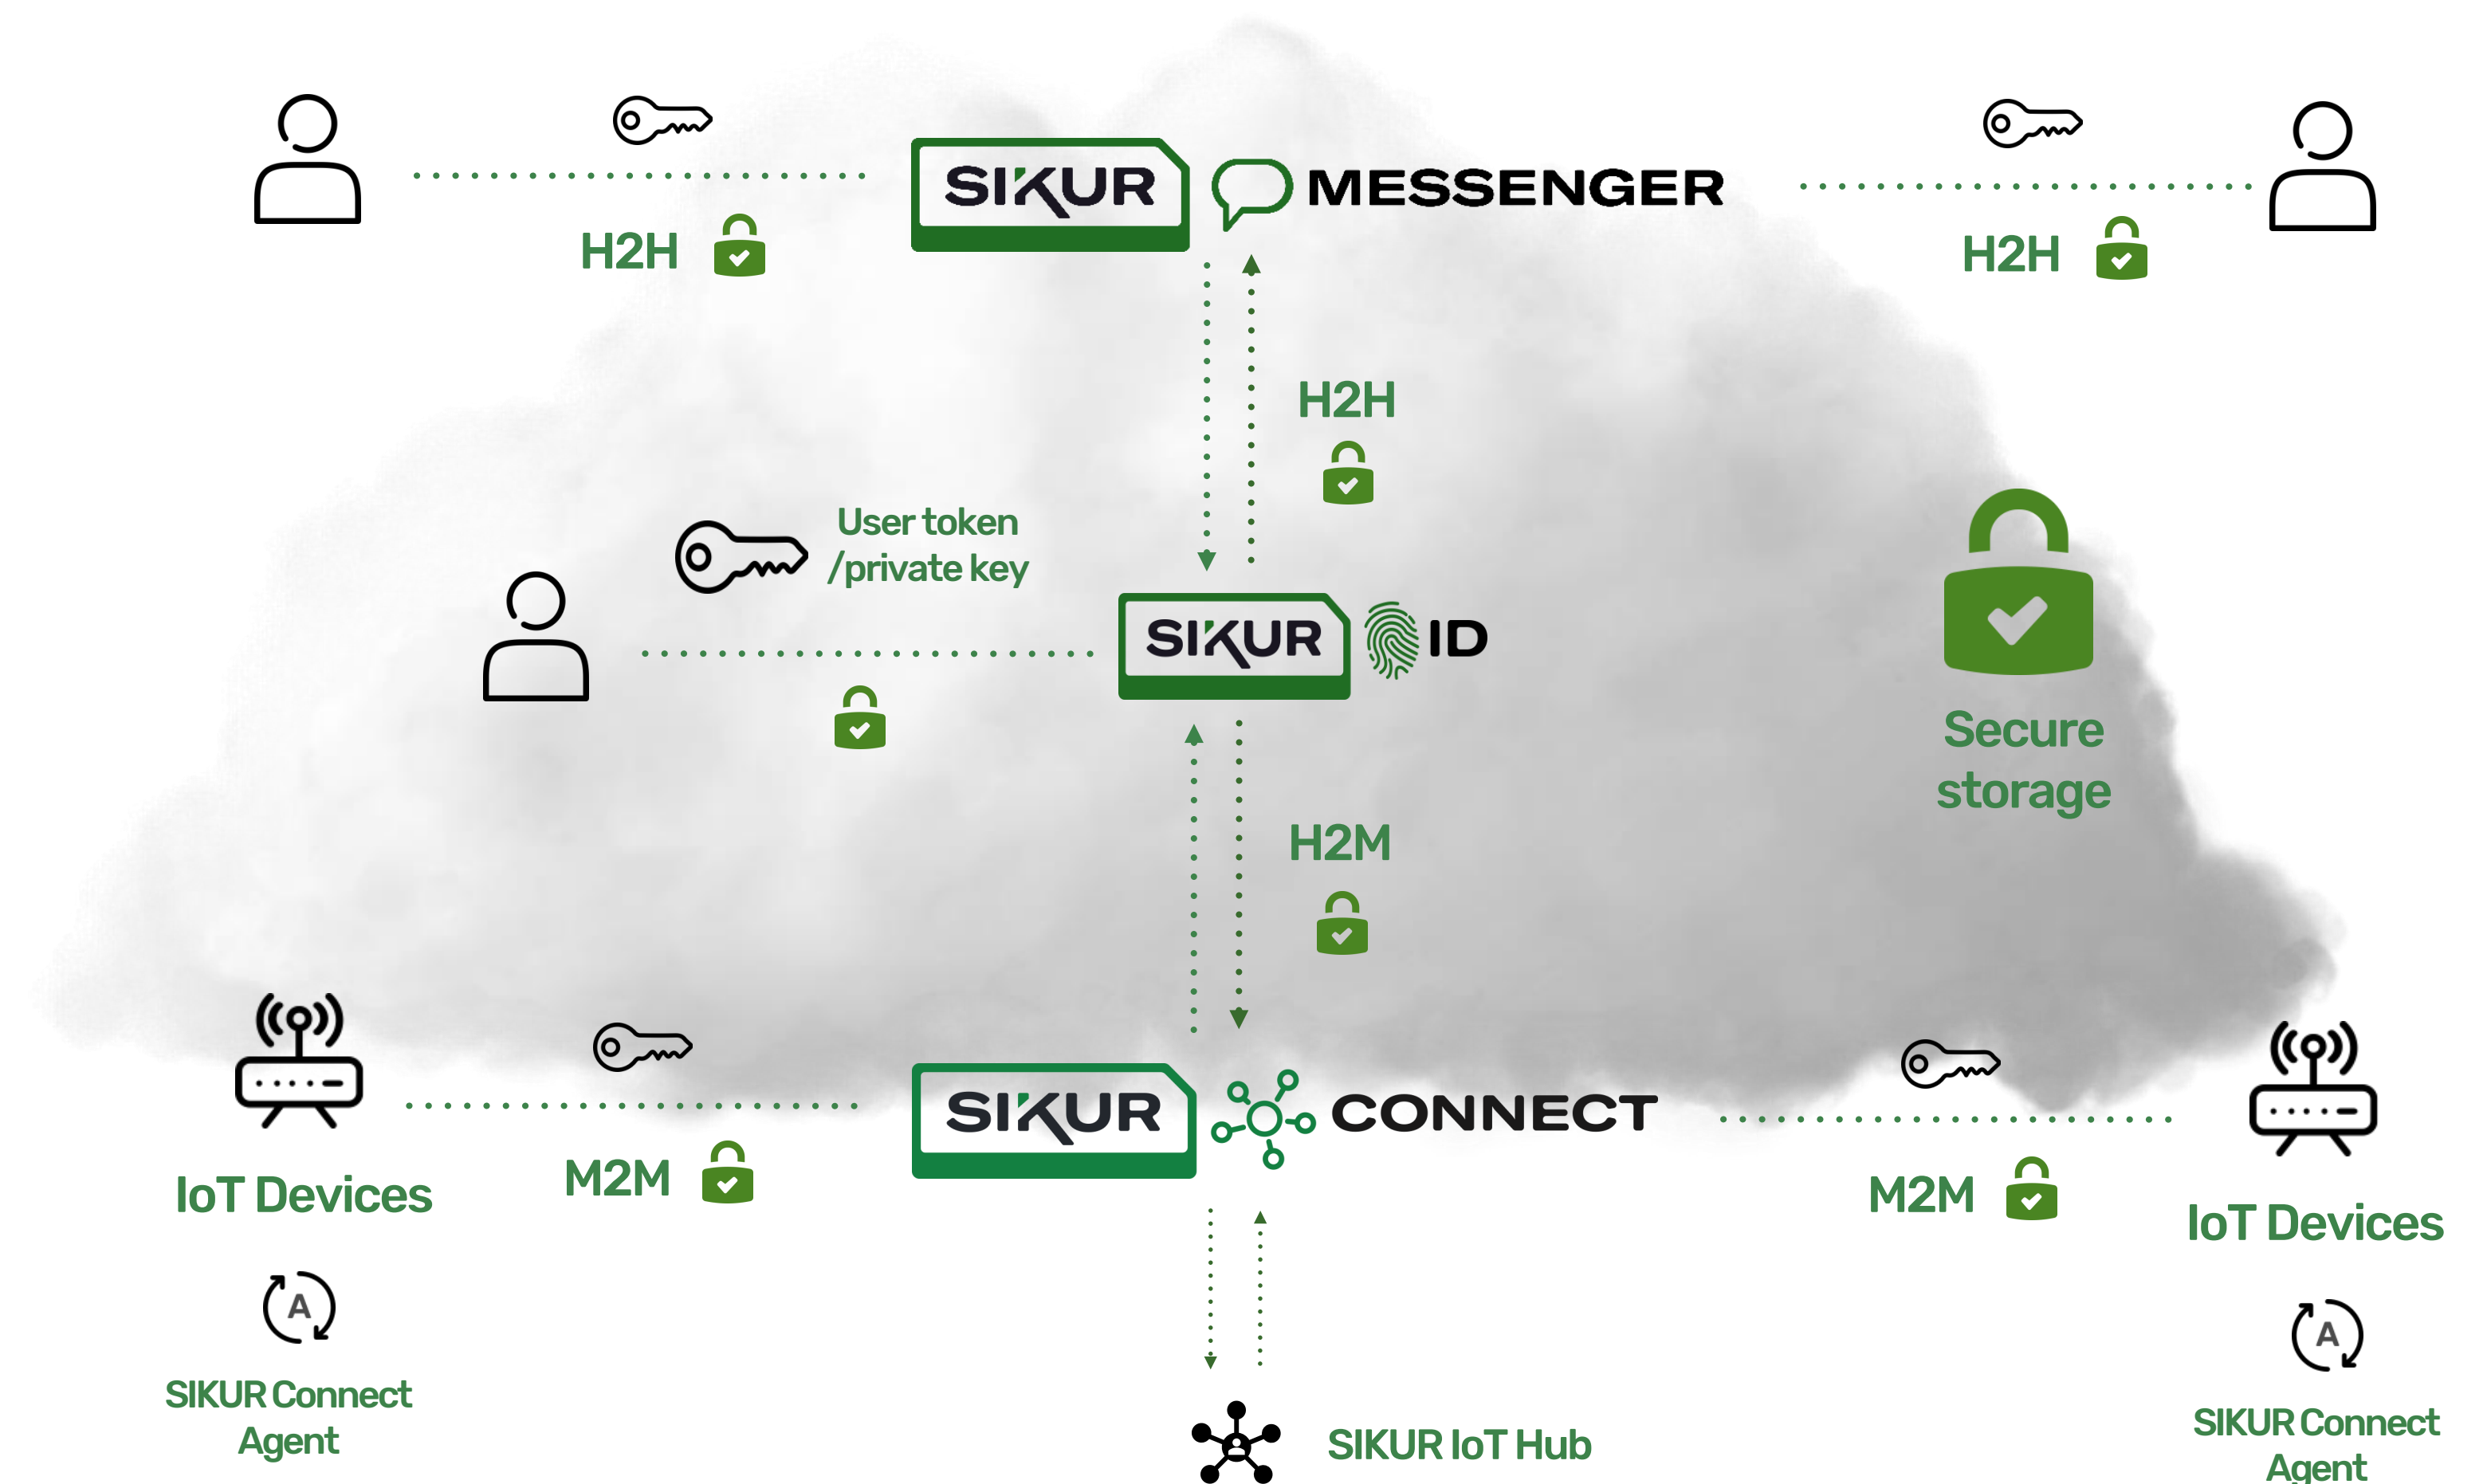

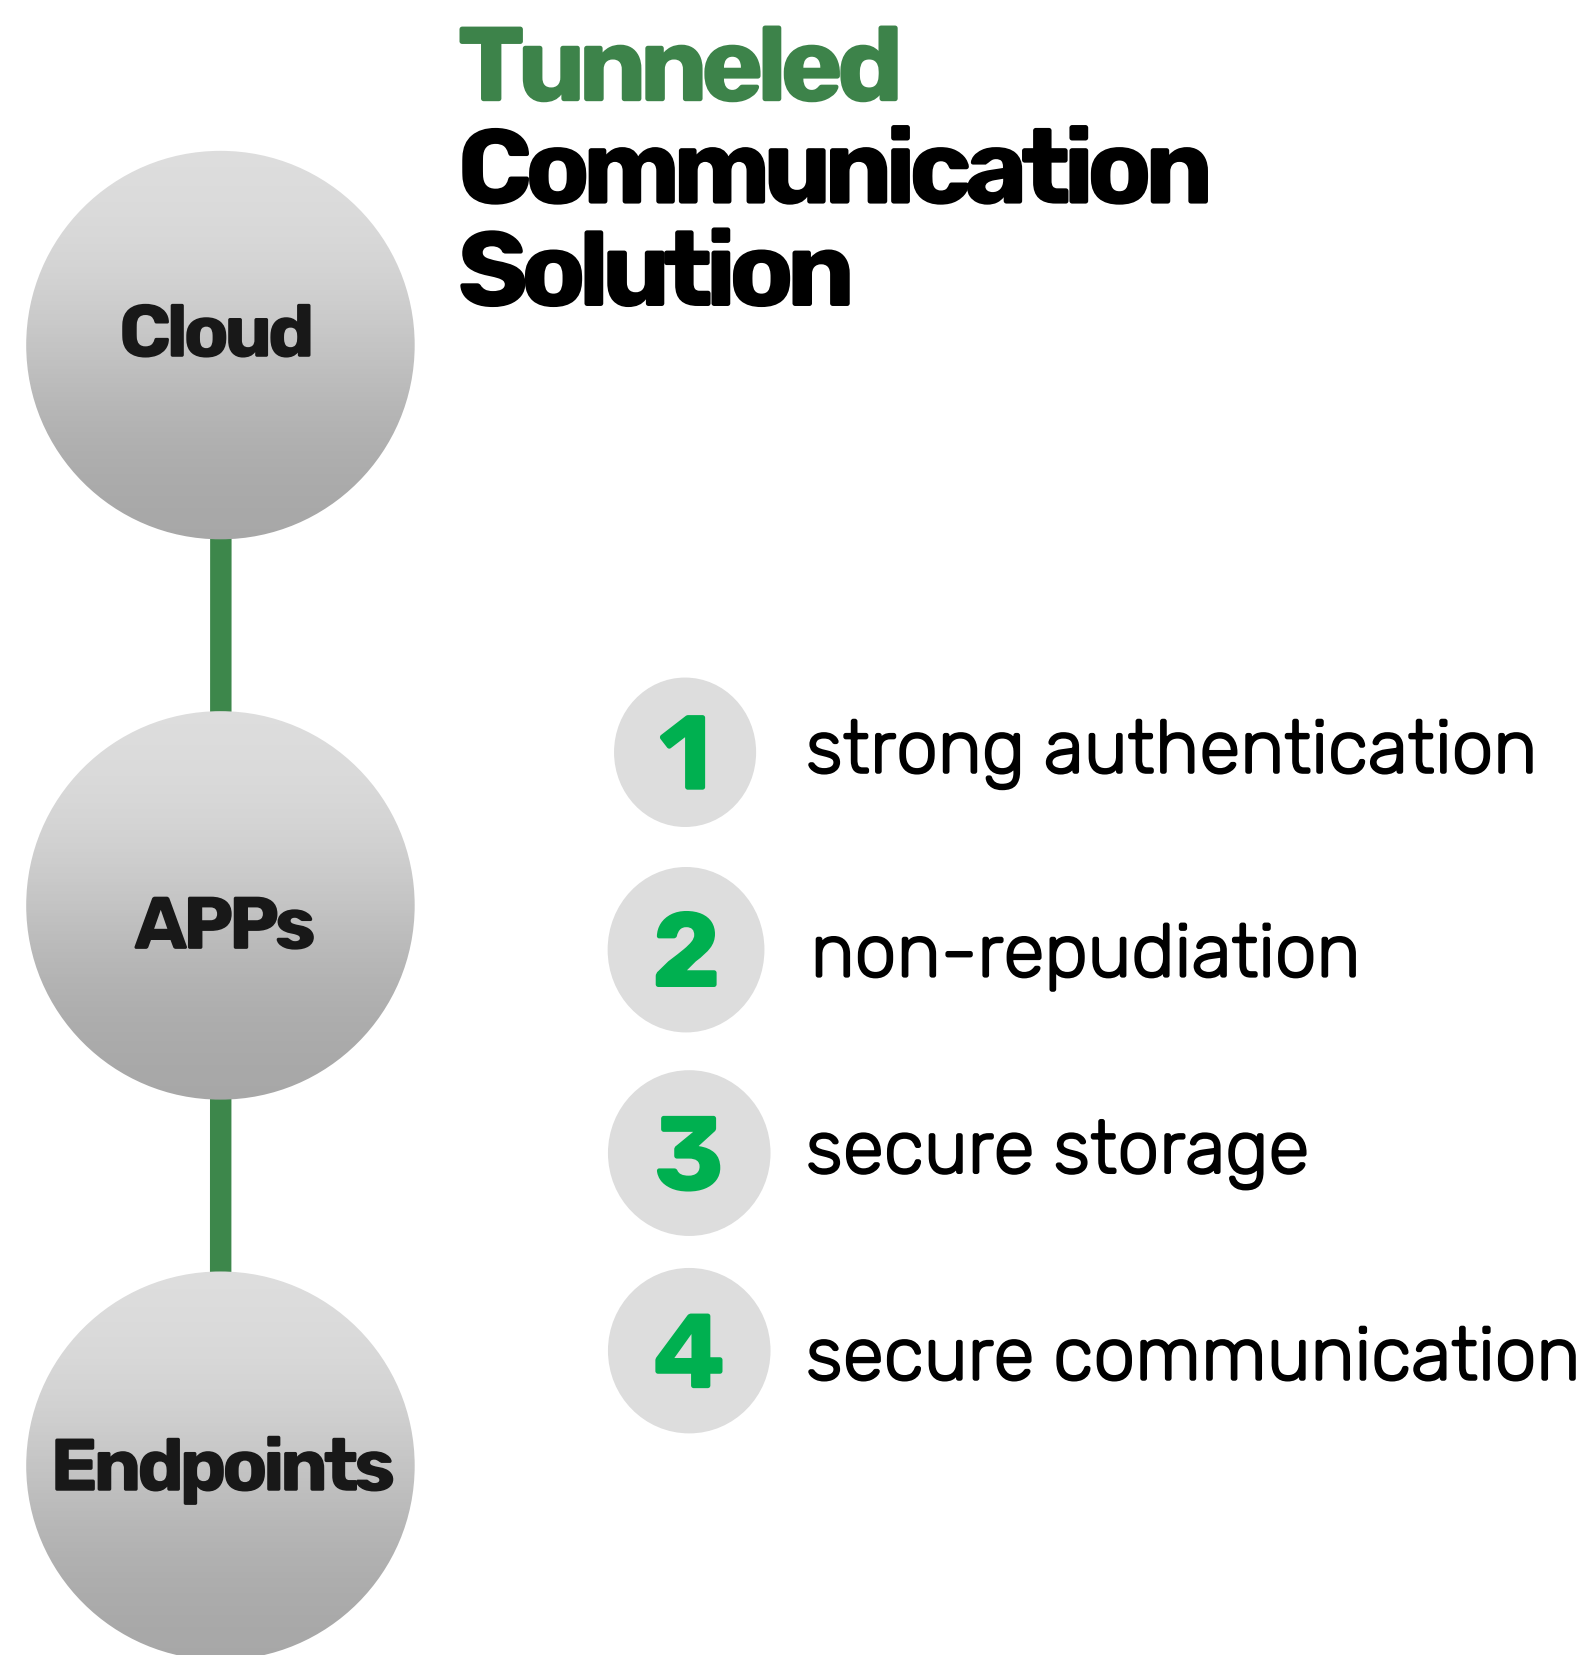

Pushing its technology to the limit, SIKUR launched the safest smartphone ever in 2016. Not satisfied delivered it to the world best hackers, and gave them a mission: break it. They failed.

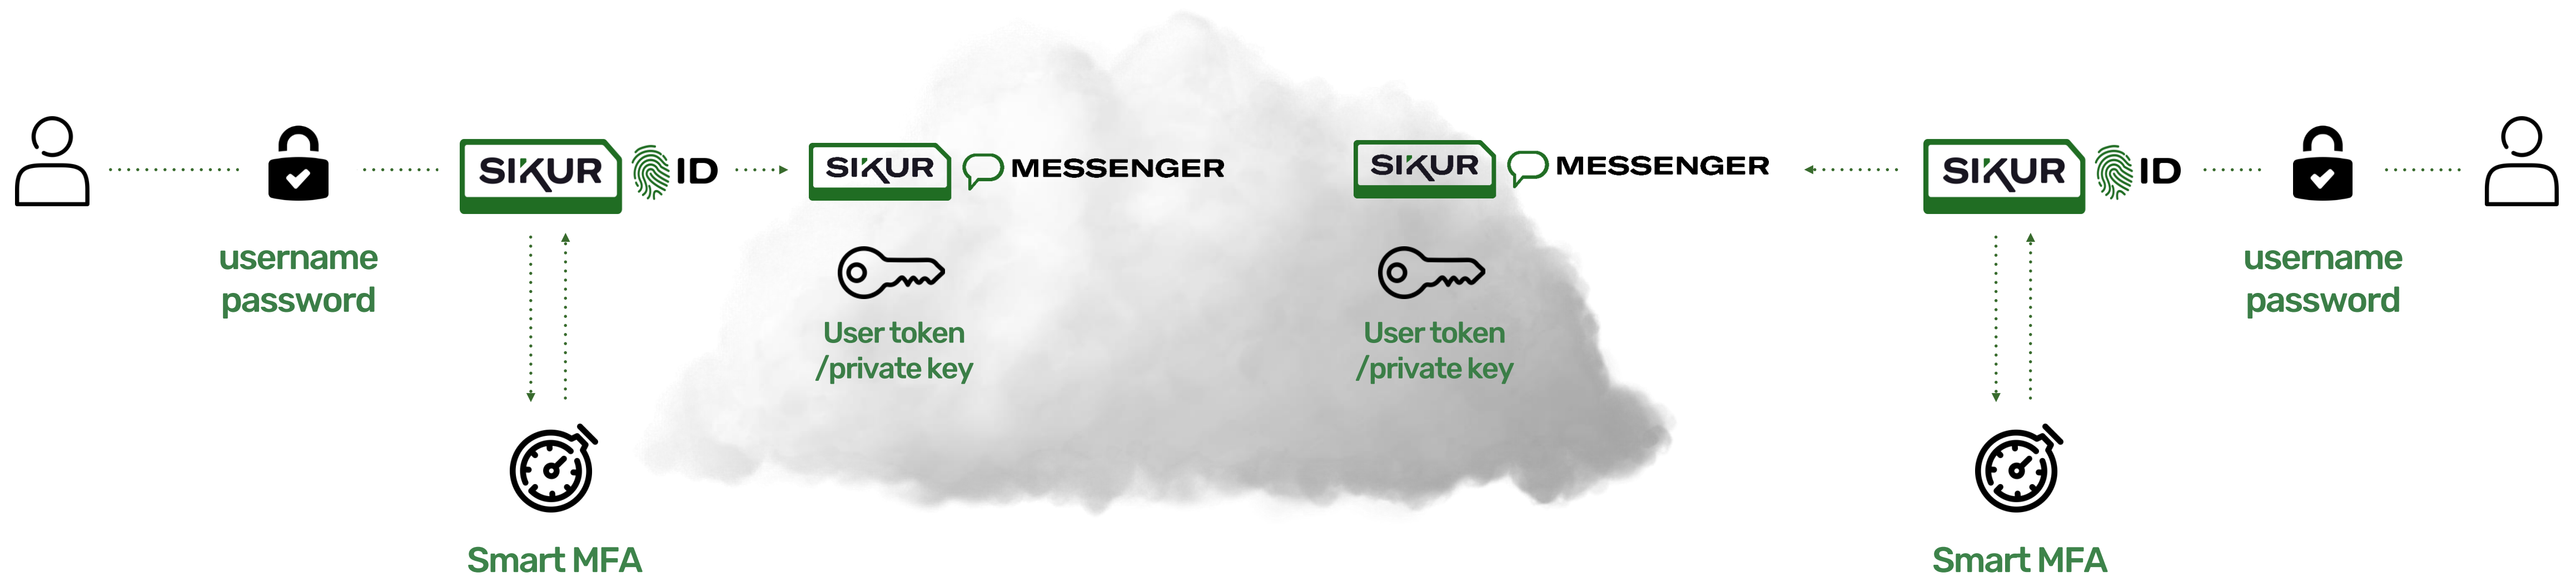

The Secure Foundation – H2H/ H2M/ H2M2M

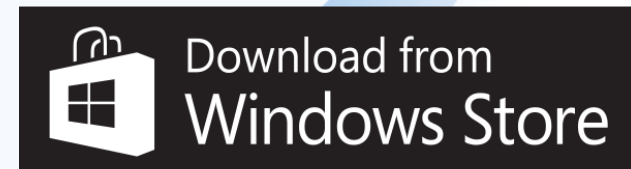

The Solution– H2H (Human to Human)

A **Military-grade** encrypted platform for **secure end to end communication**

The Solution – features

Send and receive instant chat and voice messages, create and group communication, safely sending files.
-  **Documents**
Collaborate: creating, editing, and sharing documents securely.
-  **Voice and video**
Forget about regular calls, use Sikur encrypted voice and video calls anywhere.

Business Model

White Label

Following a worldwide trend of micro private networks with usability

Private Cloud

Software as a Service

Azure Cloud

The SaaS White Label model delivers the best cost/benefit relationship for secure communication while having its brand in the product. It is all cloud-based and no need for any managed infrastructure.

Private Cloud

Azure Cloud

Sikur Pro delivers the very same security and feature level as SaaS. It complies with regulations that demand data in a cloud infrastructure nearby - customer data in the same country, for instance. Also, it provides a separate cloud space so that the customer has no resource competition with other Sikur's clients.

Your Cloud

On-Premises

Sikur Premium comes as a unique project. Designed for higher loads - no different from the previous models - it delivers an on-premises secure communication platform. It is ideal for complying with regulations that recommend no cloud infrastructure at all, hosting all computational resources locally.

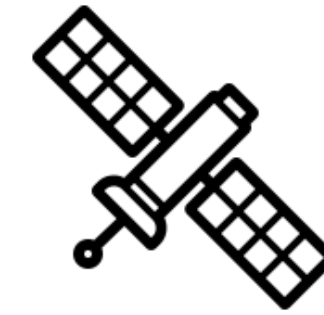

Target Market and Strategic Support

Defense

Government

Telco

Finance

Health Care

Data Regulation

Cases

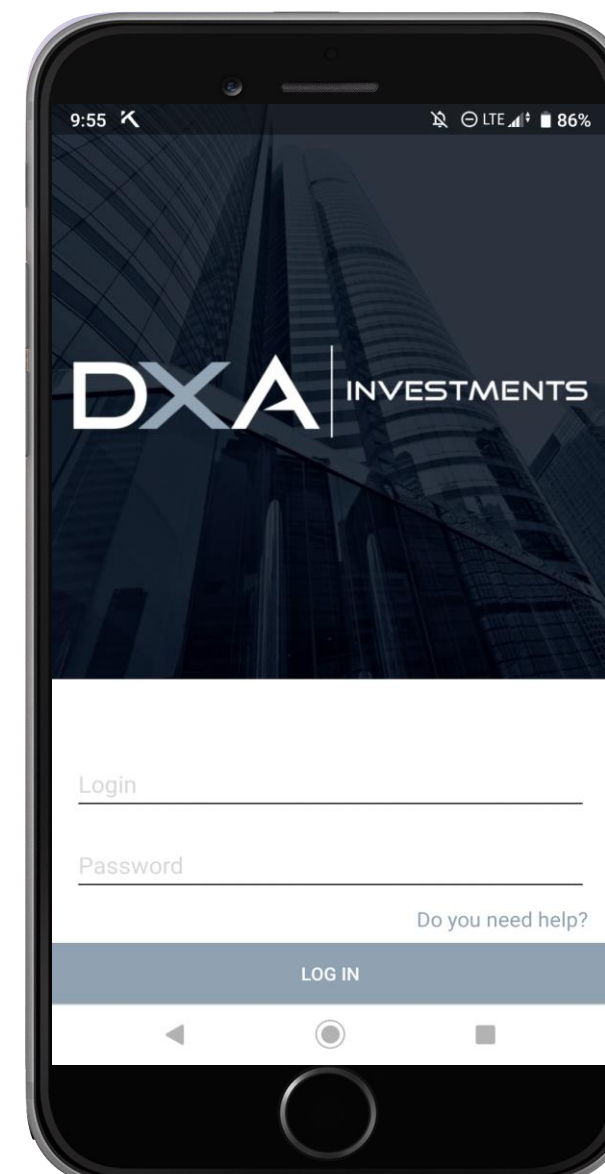

Vita Investiments – Latam

- Azure Cloud: Sikur Private Cloud
- Type: Final Client
- Market: Investments Company
