SIMCORP SOFTWARE- AS-A-SERVICE

SimCorp

SIMPLIFY YOUR OPERATING MODEL WITH SIMCORP SAAS

SimCorp SaaS at a glance:

- Agility, scalability & flexibility
- Secure, robust & reliable
- Transforming business operations
- Access to innovation
- One vendor full service

SimCorp's Software-as-a-Service (SaaS) solution delivers unparalleled value to customers by combining implementation best practices with continuously refined operations. Providing so much more than standard hosting, SimCorp SaaS is a comprehensive application lifecycle management service, delivered with a continuous development roadmap to enhance your organization's resilience and efficiency.

5 REASONS TO CHOOSE SIMCORP SAAS:

To learn more about how SimCorp SaaS can transform your business operations, speak to your SimCorp representative.

1. Agility, Scalability & Flexibility: SimCorp SaaS empowers investment managers with efficient transformation projects, enabling rapid time-to-market and expansion into new geographies. With flexible capacity on demand, new environments can be provisioned within a day, while cloning capabilities ensure precise replication, including all established integrations. Automated deployment of configuration changes and upgrades streamlines release activities, allowing resources to focus on value-added tasks.

2. Secure, Robust & Reliable: Operated on an infrastructure designed for optimal application performance, SimCorp SaaS follows industry best practices tailored to each customer's needs. With a highly available infrastructure based on Microsoft Azure data centers, the risk of service degradation and outages is minimized. Robust and proactive solutions, audited to international standards like SOC2 Type II, address compliance and cybersecurity risks, while zero-effort operations and expert support mitigate operational risks.

3. Transforming Business Operations: By shifting focus from platform maintenance to business innovation, customers can avoid staffing challenges and skill shortages. A predictable flat fee subscription model eliminates costly upgrade projects and aligns expenditure with operational expenses (OPEX) rather than capital investments (CAPEX). Additionally, SimCorp SaaS integrates seamlessly with other SimCorp services, facilitating streamlined operations.

4. Access to Innovation: Managed according to industry best practices, SimCorp SaaS ensures customers stay ahead by providing quick access to capacity and easy deployment of new services. A self-service portal offers insights into environments, monitoring of batch jobs, capacity provisioning, service levels, and more. Integration with various identity providers streamlines user provisioning and access control, while access to the SimCorp partner ecosystem simplifies access to cutting-edge services and technologies.

5. End-to-end expertise for a complete service: We assume full responsibility for the entire stack, guaranteeing SLAs across the entirety of our service. Our end-to-end accountability philosophy eliminates any debates on responsibility and accountability among multiple vendors. By entrusting all operations to SimCorp, our customers benefit from premium service levels covering the full SaaS stack, including Service Desk, Availability, and Disaster Recovery. Furthermore, we are committed to continuous service improvement, utilizing an everything-as-code-based operating model. Our evergreen platform minimizes the risk of disruptive changes, empowering you to focus on your activities.
