

## Prophecy Express For Databricks

Prophecy Express delivers AI data analysis: bringing together data and business experts to find, understand, transform, and deliver data with AI agents by generating, refining, and deploying enterprise class data pipelines both visually and in code.

With Prophecy Express, you can go from raw data to insights by creating new Databricks data pipelines or migrating legacy workflows. Designed for rapid onboarding, Prophecy Express enables all data users to find, understand, transform, and deliver data on Databricks without the time and expense of complex engineering processes or legacy data prep. You can start by chatting with AI, complete your analysis with visual data pipelines, and deploy to production with robust engineering best practices.

This offer includes prescriptive onboarding services delivered by the Prophecy Customer Success team. You can choose of one of the following two outcomes:

- 1) **Accelerate Data Analysis by Up To 70%**: Develop a new data analysis pipeline, using AI, automation, and observability.

Or

- 2) **Modernize to accelerate time to production by up to 50%**: Modernize from legacy ETL Alteryx workflows with AI and automation to enable analysts and business users to create enterprise grade pipelines.
