Application Modernisation Proof of Concept

We meet you where you are on your cloud journey

In today's technological landscape there are few questions asked more often than "are you in the cloud?". Creating software for the cloud is easy, creating software that utilises the cloud effectively requires experience. SixPivot has years of experience in utilising the cloud to scale applications globally and cost effectively. We help organisations build new products cloud first and create strategies to successfully migrate existing products from off premise or to a hybrid platform.

Lots of companies have great ideas about how technology can change lives. Because not all companies are "software companies", SixPivot can provide a team of experts to provide a world class software development capability to any organisation. We have worked with companies from all types of industries transforming their ideas into successful software products and solutions.
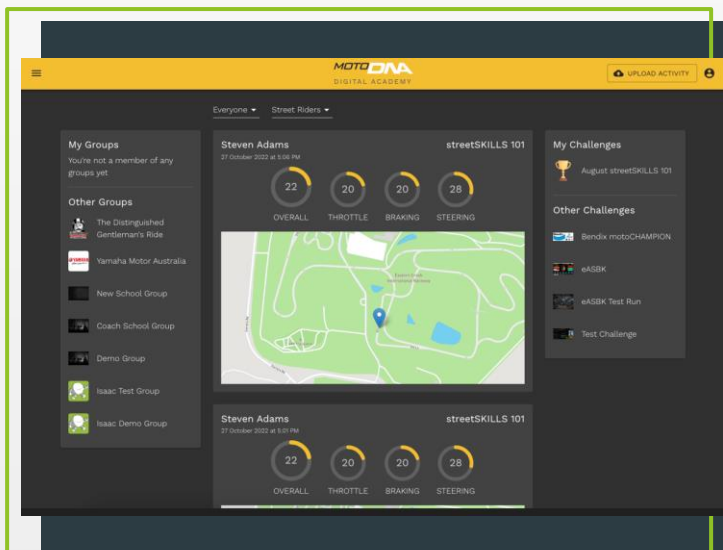

WHAT WE OFFER:

Application Modernisation Proof of Concept (PoC)

The SixPivot team has a strong history in software engineering and DevOps culture, our ethos is to build solutions that can be used immediately and supported into the future. We use experience gained on similar projects to design for growth in the future. We place high value on using and improving established processes and tools.

With our Application Modernisation offering we will work with you to review your target application, understand existing challenges, and identify opportunities for modernisation using Azure cloud services.

A typical Application Modernisation engagement:
- Selection and review of existing application for migration
- Agree target state for the app service migration
- Review dependencies of the existing application
- Identify opportunities for software changes which would enable more effective use of Azure services
- Create Solution architecture design for migration
- If required, undertake a short proof of concept to validate the proposed high-level concept
- Migrate source code of existing application to Azure DevOps or GitHub
- Configure CI/CD build and deployment pipelines
- Deploy of target application and database to Azure using pipelines
- Work with your team to ensure they understand the solution and how to support it ongoing
- Provide an Application Migration Strategy roadmap for future migrations

See what customers are saying:

"As we wrap up our V1 software I'd like to provide some feedback and look at what's next. I'm over the moon with how the project has gone, it exceeded our expectations. You have a team of not just technical wizards but great people too."

- Mark McVeigh, CEO, motoDNA

Why Microsoft Azure?

Be future-ready

Continuous innovation from Microsoft supports your development today, and your product visions for tomorrow. With 1,000+ new capabilities in the past year, you can build on the latest advancements in AI, blockchain, Kubernetes, containers, and databases to keep you ahead of the curve.

Our enterprise grade analytics solution outperforms the competition, costs less, and is fully compatible with your existing development, BI, and data-science tools.

Operate hybrid seamlessly

On-premises, in the cloud, and at the edge—we'll meet you where you are. Integrate and manage your environments with tools and services designed for hybrid cloud.

Enhance security, simplify access, and set smart policies across your different environments with a single-identity platform trusted by 90% of enterprises globally.

Build on your terms

You have choices. With a commitment to open source and support for all languages and frameworks, build and deploy how you want to. Take advantage of the full-featured, integrated development environments with built-in support Visual Studio and Visual Studio Code, the most popular IDEs trusted by 15M+ developers.

We embrace open source, drive innovation through collaboration, and contribute back to the community.

Trust your cloud

Get security from the ground up, backed by a team of experts, and proactive compliance trusted by enterprises, governments, and startups.

With a $1B+ investment in security R&D and 3,500 cybersecurity experts, security is foundational for Azure.

Microsoft Azure

Microsoft Azure is an ever-expanding set of cloud computing services to help your organization meet its business challenges. With Azure, your business or organization has the freedom to build, manage, and deploy applications on a massive, global network using your preferred tools and frameworks.
