

SECURE INTEGRATION HEALTH CHECK

Get clarity on your risk before it becomes a problem

WHO IT IS FOR

This engagement is designed for organisations that:

- Expose APIs or integrate with external partners, suppliers, or platforms
- Are onboarding new partners or expanding digital ecosystems
- Operate in regulated or risk-sensitive environments
- Want confidence in security, governance, and scalability before audits or change

Many organisations already have working APIs and integrations with partners, suppliers, and external platforms. Over time, however, these environments often evolve organically, **leading to inconsistent security controls, manual partner onboarding, fragmented governance, and increasing operational risk.**

The **Secure Integration Health Check** is a **fixed-price, short-duration engagement** that gives you a clear, independent view of how **secure, governed, and scalable your integration environment really is**, and what to do next.

THE PROBLEM WE HELP SOLVE

“We need integrations – but security, governance, and operational risk are slowing us down.”

COMMON SYMPTOMS WE SEE

- Security controls that have grown organically and are inconsistent
- API gateways and access policies are configured differently across teams
- Partner onboarding that is manual, slow, and risky
- Early design decisions now limiting scale or increasing cost

The result is **uncertainty**, **delayed delivery**, and **elevated risk**, often without clear visibility.

If you're planning new integrations, onboarding partners, preparing for audits, or want confidence that your APIs are secure and scalable, the **Secure Integration Health Check** is a practical place to start.

COMMON SYMPTOMS WE SEE

- Security controls that have grown organically and are inconsistent
- API gateways and access policies are configured differently across teams
- Partner onboarding that is manual, slow, and risky
- Early design decisions now limiting scale or increasing cost

WHY SIXPIVOT

- Deep experience delivering secure API and integration platforms
- Proven capability across Azure API Management, identity, private networking, and EDI
- Trusted by organisations operating in high-risk and regulated environments
- Focused on enablement and outcomes – not just compliance

COMMERCIALS

- Fixed price engagement 5-10 days, depending on environment complexity
- Short duration (typically 2-3 weeks)
- No long-term commitment required
- Designed to be a low-risk way to get clarity fast.
