Azure DevOps Assessment

Plan smarter, collaborate better & ship faster with modern development services.

What is DevOps?

Transform Your Azure Experience with SixPivot Azure DevOps Consulting Services

DevOps represents a fundamental shift in how software development and IT operations collaborate, enabling faster and more reliable software delivery. At SixPivot, we recognize that successful adoption of Microsoft Azure demands more than just access to tools—it requires expertise, capabilities, and know-how to navigate effectively. Our goal is to empower your organization to leverage Azure to its fullest potential, whether you're just beginning your Azure journey or seeking to enhance your existing usage.

Our Azure DevOps Consulting Services are designed to bridge the gap between your current capabilities and the full spectrum of possibilities Azure offers. We understand that DevOps is more than just a set of tools—it's a cultural shift that fosters collaboration and integration across teams and stakeholders. By combining our expertise with Azure DevOps, we help you streamline processes, accelerate development cycles, and deliver software with increased efficiency and reliability.

During our engagement, we leverage Microsoft Azure services to their fullest extent, ensuring that your organization gets the most out of the platform. Whether it's setting up Azure pipelines for continuous integration and deployment, implementing Azure Boards for agile project management, or utilizing Azure Repos for version control, we guide you in utilizing these services effectively to meet your specific needs.

Through our tailored approach, we guide you in establishing a culture of collaboration and automation within your organization, ensuring that your teams can build, test, and deploy software rapidly and consistently. Our services go beyond simply migrating to the cloud; we work with you to optimize your processes, automate workflows, and provide insights and reporting to maximize the return on your investment in Azure.

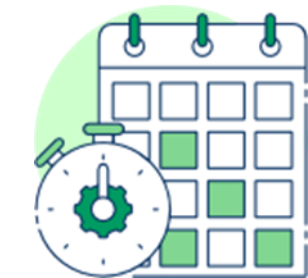

With SixPivot's Azure DevOps Services, you can transition from your current state to achieving the Azure DevOps Maturity Model, unlocking new levels of efficiency and innovation along the way.

To help you get started, we offer two assessment packages:

ASSESSIT (5-day package) - \$13,200 ex GST

POCIT (10-day package) - \$24,200 ex GST

Experience the transformative power of Azure DevOps with SixPivot. Let us help you unleash the full potential of Microsoft Azure for your business.

Assess-IT	5 days
Deliverable	Assess, Design & Plan
Assessment Report	Assessment and Roadmap – Provides insight into the maturity of your software development capabilities and recommends potential improvements.
Architecture Design	Current vs Desired state & Progression Framework
Deployment Plan	DevOps Implementation Recommendations – Provides you with an implementation plan with actionable steps to improve your organization’s capacity for continuous delivery.
	<p>Phase 1: Pre-Engagement Activities – Day 0</p> <p>Phase 2: Kick-off and Presentation – Day 1</p> <p>Phase 3: Workshops and Interviews – Day 2 – 3</p> <p>Phase 4: DevOps Implementation Assessment Deliverable Development – Day 4</p> <p>Phase 5: Plan and Resources Delivery – Day 5</p>
Total Cost Inc:	\$13,200

SixPivot

POC-IT	10 days
Deliverable	Assess, Design, Plan & PoC
Assessment Report	Assessment and Roadmap – Provides insight into the maturity of your software development capabilities and recommends potential improvements.
Architecture Design	Current vs Desired state & Progression Framework
Deployment Plan	DevOps Implementation Recommendations – Provides you with an implementation plan with actionable steps to improve your organization's capacity for continuous delivery.
PoC (Proof of Concept)	<p>The POC is a tightly controlled, limited scope session using a temporary tenant or deployment intended to show you the particular capabilities and features in action.</p> <p>The 10-day POC-IT will include the first 5 days of the Assess-IT, plus an additional 5 days to develop the Proof of Concept (POC).</p> <p>POC – Example scenarios include: a DevTest solution in support of standardized test environments; an automated Release Management solution; or, for mobile development, the implementation of Xamarin Test Cloud and the automated testing in support of higher quality software.</p> <p>The end result of this engagement is a mature DevOps workflow. This POC implementation IS NOT A FULL INSTALLATION and will not meet all your production requirements. As a part of this engagement, we will provide next steps for moving to a full production environment.</p>
Total Cost Inc:	\$24,200
