Improving women's breast screening journeys

A dedicated Digital Medical Record for Breast Screening organisations

The World Health Organisation states that breast cancer is the most frequent cancer among women, impacting 2.1 million women every year. It was estimated that up until 2018, the total number of women worldwide who qualified for breast cancer screening could have reached 250 million.

This creates a growing pressure on breast screening organisations and their scheduling and screening capacity. Giving clinicians access to digital client data in a fast and safe manner improves their clients' screening journey.

## Key challenges faced by Breast Screening Organisations

1 **An increased demand for client appointments** puts pressure on clinics to deliver their service in a timely manner to as many women as possible.

2 Paper files risk **clients' data security** with potential for lost or missing information and accidental mislabelling.

3 **Duplication of data entry** throughout the client journey leads to increased administration time and costs and increased scope for error.

4 **Client flow inefficiencies** mean data is not automatically updated & made available in real time to staff members who are meeting clients.

5 **Challenges with multidisciplinary consultations** when the physical paper client file can only be located in one place at a time.

6 **Multiple non-integrated systems in place** requiring users to switch between applications throughout the screening process.

7 **Client expectations of a digital-first experience** allowing for electronic invitation and reminders for screening and notification of results.

Work with Digital Breast Screening Experts

Vitro Software's Breast Screening DMR has been designed to streamline the client journey through the screening and assessment processes. Vitro provides an end to end solution, which follows the administrative and clinical client journey and can integrate with existing systems in place. Either way, the user experience is seamless! Vitro facilitates faster follow up of screening, results and assessment appointments which has been proven to benefit clients hugely.

Vitro's user friendly interface mimics a traditional paper chart, making it easy to navigate & enter data throughout all stages of a client's clinical assessment.

A digital workflow of Vitro Apps follows a best-in-class breast screening process for clinical assessment, making it easy for clinicians to enter, manage and view their clients' data without duplication. Workflows can be tailored to each organisation's unique needs.

The Benefits

A Breast Screening solution that creates a **fully digital experience** for clinicians & clients during the breast screening process.

Increased capacity of client appointments by replacing a manual client flow process with Vitro's digital client journey board.

Multidisciplinary access is enabled so clinicians can consult on client cases **from varied locations**.

Reduced risk of data duplication, safety of the client's data & reporting capabilities.

Benefit from **Operational efficiencies & a streamlined experience** with an end to end or fully integrated solution.

Vitro's digital Client Journey Board provides **improved client flow** throughout clinical assessment with real time visibility of each client's position on their assessment journey.

The Future

The flexibility of the Vitro platform allows for future layering of functionality to suit your organisation's needs. We continue to build our solution with the expertise of Breast Screening Organisations world-wide, to bring each of our clients a best-in-class system.
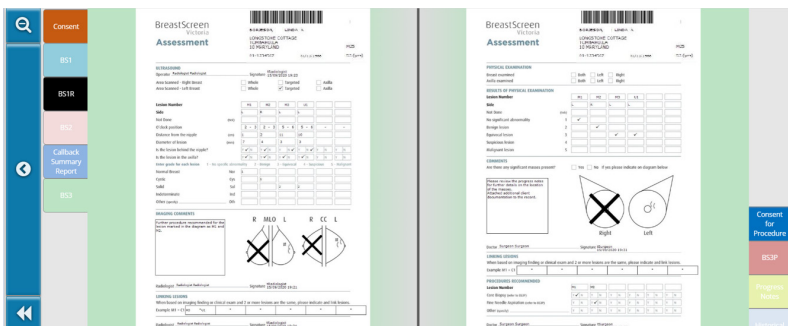

Vitro Voice, our embedded Voice Enablement functionality, allows user voice commands to navigate and open Vitro Apps, enter and edit text, significantly reducing keyboard 'clicks'. Complete your client records with speech, not touch!

Assessment Apps in Vitro (zoom using your PDF viewer)

" "Our clinicians quickly experienced the benefits of Vitro, a flexible system designed specifically for the breast assessment service"

"Our clinicians found the software easy to use, and our team found that the time taken to issue written results for clients with an "all-clear" outcome at assessment reduced from 12 days to one or two. The new digital whiteboard has improved patient flow, providing for a better experience for both clients and staff." "

Dr Helen Frazer, Clinical Director at St Vincent's BreastScreen
(BreastScreen Victoria, Australia)

Founded in 2006, Vitro Software is a leading technology company specialising in Healthcare IT. The Vitro platform was brought to market in 2012 to enable healthcare providers internationally to move away from paper, creating efficiencies while also reducing costs, reducing change management challenges and providing better patient outcomes.
