

BlackSlope - Infrastructure API Accelerator

BlackSlope is a simple, open-sourced solution designed to increase the speed at which your team will build their highly scalable APIs.

The keys behind its design are that the API building process is now **SIMPLE, PORTABLE, MAINTAINABLE, and TESTABLE**

BLACKSLOPE ADVANTAGES

Using this accelerator as reference architecture has immediate benefits

Reliable Solution and Cross-Platform

BlackSlope has been used as an accelerator at 6, and growing, clients successfully. With the cross-platform capabilities inherent in its core, BlackSlope is able to meet our diverse set of clients where they are technically and bring immediate value to the project.

Speed up Development

By having a collection of ready to use tools and features, BlackSlope improves development speed. Using it reduces time and effort to implement a solution and as a result the cost of development, allowing a better price to win for our sales team and clients.

WHERE IT'S BEEN USED

BlackSlope as a solution has been utilized at 6 clients, with 1 referenceable story at [FHLB Chicago](#)

Decrease Proposal and Design Time

With the increase in reliability and speed to deliver, sales proposals and technical architecture design times are greatly lowered, enabling our sales team to get to project start dates sooner.

MORE INFORMATION
