

Fabric Monitor:

Monitoring and Managing Enterprise Analytics and BI

An added level of governance

Microsoft Fabric and Power BI are valuable tools for any organization looking to modernize its enterprise analytics and BI strategies. While their flexibility, scalability, and self-service capabilities are highly beneficial, these same qualities can lead to sprawl, which makes governance difficult.

Monitoring is critical to successful governance and adoption of any business technology, but when managing applications that have access to your organization’s most crucial data, it becomes an even greater priority. Slalom’s Fabric Monitor solution provides visibility into Fabric tenants’ complex data landscapes, allowing organizations to improve enterprise data governance, streamline self-service reporting, and administer workspaces, apps, and licenses much more easily and efficiently.

A safe, secure, and truly self-service BI culture

Working together with your data teams, Slalom can help you zero in on your specific pain points, such as a lack of trust in dashboard data, fragmented data sources, ungoverned data sharing, or bottlenecks in report generation. Fabric Monitor delivers the means to eradicate these issues so you can better:

Measure BI adoption

Govern and manage content

Enable data discovery

Achieve a true self-service BI culture

SLALOM + MICROSOFT

For two decades Microsoft and Slalom have delivered innovation together. Our shared purpose is to realize greater impact through collaboration and enable every person and organization to achieve more.

We lead with a people-focused approach to help our clients reach for and realize their vision of better tomorrows powered by Microsoft solutions.

8,600+

Microsoft projects delivered

2,200+

Microsoft certifications held by our delivery teams

50+

Times recognized by Microsoft as a valued partner

The outcomes

- Visibility into Microsoft Fabric and Power BI usage to enable adoption tracking, content governance, and data discovery
- A single solution with all relevant tenant data and data orchestration/transformation capabilities
- Improved discovery of BI assets across the organization
- Cost optimization from improved user license monitoring and management

Features & Use Cases:

Knowledge Is Power: Better Visibility Means Fewer Surprises

Turning unknowns into knowns

With Slalom's Fabric Monitor offering, you'll be able to answer questions such as:

- What data sources are used most in our reports?
- Are items being shared according to our organizational policies?
- Are reports being used as much as we expected?
- Are we paying for unused Pro licenses?
- Who are our most influential power users who deserve organizational recognition and support?
- Are KPIs defined consistently across all data models?

Getting started

We will work with your organization's data leaders to identify use cases, deploy and manage the Fabric Monitor solution in your environment, and ensure you have all the appropriate roles and processes to properly govern your data. The result will be more comprehensive visibility into a BI practice where everyone has full trust in their interactions with your organization's tools and data.

About *Slalom*:

- Slalom is a purpose-led, global business and technology consulting company.
- We're a local company—where employees live and work near the same communities as our clients—with a global reach.
- We help customers for the long term, not just the project's term, from strategy to implementation and ongoing support.
- Our people-first approach enables organizational transformations that result in rapid adoption and produce durable customer impact and employees learning to work in new ways.
