

Gain visibility into Power BI and Microsoft Fabric usage to enable usage tracking, content governance, and data discovery with Slalom’s pre-built “Fabric Monitor” Accelerator.

Challenges

Microsoft Fabric offers users incredible flexibility to create - Slalom’s “Fabric Monitor” Accelerator delivers flexibility to monitor usage and leverage data to manage your environment more effectively.

Measure BI Adoption

Govern & Manage Content

Enable Data Discovery

Solution & Approach

Extract, transform, and report on detailed activity log and metadata exclusively using components native to Microsoft Fabric.

Integration with Power BI Admin APIs

Custom code ready to run in your tenant with only a few configurations

Purpose-built datastore

All necessary tables, fields & views needed to start monitoring your Fabric tenant

Power BI Monitoring Reports & Datasets

Pre-configured datasets with associated reports that provide instant value and are ready to be customized to fit your needs

Let’s get started

Use Case Workshop

Two-hour use case identification workshop with Business and Data & Analytics leaders

Monitoring Application

Follow-on engagement to deploy and customize the Power BI Monitoring Solution
