Accelerated Modernization
with GitHub Copilot

Modernize legacy systems faster and transform your organization with Slalom's GitHub Copilot expertise.

Modernize mainframes, monoliths and legacy tech with AI.

Legacy systems are high-risk to modernize—they're fragile, poorly documented, and deeply embedded in operations. Our outcome-driven approach goes beyond adoption to drive application modernization through:

Accelerated alignment

Turn ideas into working proofs of concept with our streamlined approach—designed to identify your biggest opportunities and scale AI adoption across engineering.

Custom Copilot rules

We leverage your team's unique development patterns and develop tailored GitHub Copilot rules into a set of constraint frameworks that amplify productivity across your entire codebase.

Strategic MCP integration

Unlock maximum value through carefully identified MCP integration points that seamlessly connect your existing systems with acceleration framework.

Proof of value

Experience quantifiable improvements in development velocity with measurable results in time-to-market and development costs with proof of value.
