

Driving digital transformation through application migration and modernization.

Lift and Shine in Microsoft Azure with Slalom Build.

"Slalom and its Build-as-a-Service is a strong alternative to more conventional players when the emphasis is on rapid cloud-native development."

— The Forrester Wave, Application Modernization and Migration Services (Q3 2019)

The Case for Change

Businesses are charting a cloud adoption path for their application workloads. However, many don't realize the value provided by options beyond a simple lift and shift. Azure's full-stack cloud offers front end, back end, data, intelligence, and DevOps PaaS services that will allow you to instead lift and shine in the cloud.

50% of enterprises focus on migrating workloads from their internal environments when deploying into a public cloud¹ **28%** are focused on a lift and shift approach, while another **28%** will undergo refactoring first¹

Why Slalom Build?

- Local** • Engineers and experts work alongside you, where your business is located
- Scale** • We leverage our network of Build Centers for capacity, breadth, and depth
- Agile** • Our Product Engineering Methodology delivers solutions with quality and speed
- Cocreation** • We actively collaborate with our clients and help upskill their teams
- Modern** • We lead with native Azure PaaS services, such as containers and serverless, that modernize your application footprint

How we help clients? What outcomes are we talking about?

- | | |
|---|---|
| Cloud Migration Acceleration | <ul style="list-style-type: none">• Identify critical applications & assess the strategy for making a move to the cloud• Define and configure secure and stable Azure foundations• Migrate your applications to leverage cloud-native services and patterns |
| Application Modernization | <ul style="list-style-type: none">• Modernize your applications to leverage cloud-native services and patterns• Innovate by building your next generation of digital products |
| Innovation and Product Engineering | <ul style="list-style-type: none">• Building a new cloud-native, digital capability to support existing or new business• Innovate by building your next generation of digital products |
| Culture of Modern Engineering | <ul style="list-style-type: none">• Modernize your organization to support your cloud-native business• Equip your people with cloud skills and capabilities |

What do our Azure clients say about Slalom Build?

"When a 70-year-old Japanese manufacturing company wanted to disrupt its business model – and the entire shipping industry – they called on Slalom Build. We not only helped them modernize their organization, we helped them lay the foundation for autonomous sea vessels of the future."

— JRCS

"By working side-by-side with our engineers and introducing its agile workflow, Slalom Build upscaled our in-house technology team, QA, and technical delivery ability more than I ever anticipated."

— Heather Shantora, CEO InnoCare

Driving digital transformation through application migration and modernization.

Lift and Shine in Microsoft Azure with Slalom Build.

How do we do it?

Slalom Build will help you **Enable** your organization for its migration journey, **Migrate** your applications leveraging modern Azure PaaS services, and **Innovate** with the full power of the Azure cloud. We meet you where you are on your Azure migration journey, as well as help modernize and accelerate your team's modern engineering skills. (note: we can execute each piece as a distinct initiative)

Enable

Helping clients untangle the roadmap details and critical dependencies, and build a production-ready, secure Azure foundation

Migrate

Helping clients with their more complex and essential applications, double clicking on key technical challenges, and executing the migration approach

Innovate

Helping clients build new experiences with modern Azure cloud technology for the most impactful business needs on their digital transformation journey

Our technology services offerings tailored to your most critical needs in the cloud migration and modernization journey

| | | |
|--|--|--|
| Assess the applications and roadmap | Technical mini-projects to remove risks or validate key requirements | Create new digital products and customer experiences |
| Define the migration or modernization approach | Deliver the migration plan using our Product Engineering Methodology | Re-imagine and build a new cloud-native application |
| Define the target architecture, scope, plan, and estimates | | |
| Build secure and scalable Azure foundations with modern DevOps | | |

Co-creation together with our clients >

Agile delivery and transformation >

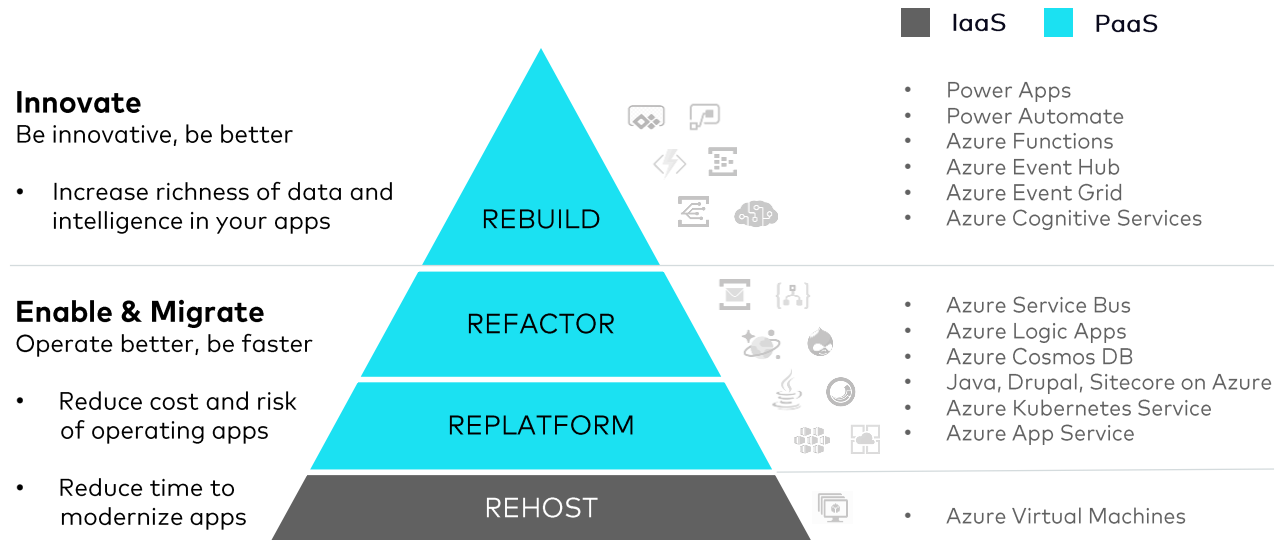

Culture of engineering >

Velocity with DevOps + quality automation
