

Web Application Modernization with Microsoft Azure

SMART business provides recommendations on the following main areas: application migration from on-premises to the cloud, optimization of existing solutions in the cloud, scaling applications in the cloud, optimization of the cost of resources used.

Modern business can face a number of challenges when using applications. As part of the provided service, SMART business will help you find the best solution for your company.

Local capacities cannot keep up with application needs

We will suggest a cloud configuration that suits your requirements based on the number of users, requests and the desired cost.

Apps are already in the cloud, but failures are occurring.

We will provide professional advice to your IT department on how to optimize your current infrastructure.

Users are located in different parts of the world

We will help you create a geo-distributed solution using databases on different continents. This will increase the speed and efficiency of customer service in different parts of the world.

Regular problems with fault tolerance of on-premises applications

Microsoft Azure cloud services provide fault tolerance 99.9% of the time. We'll make a list of recommendations for using cloud services.

The need to monitor Microsoft Azure cloud resources

We will provide recommendations on the selection and configuration of services for monitoring the availability of architectures: servers, virtual machines, services and applications.

Business scaling is planned

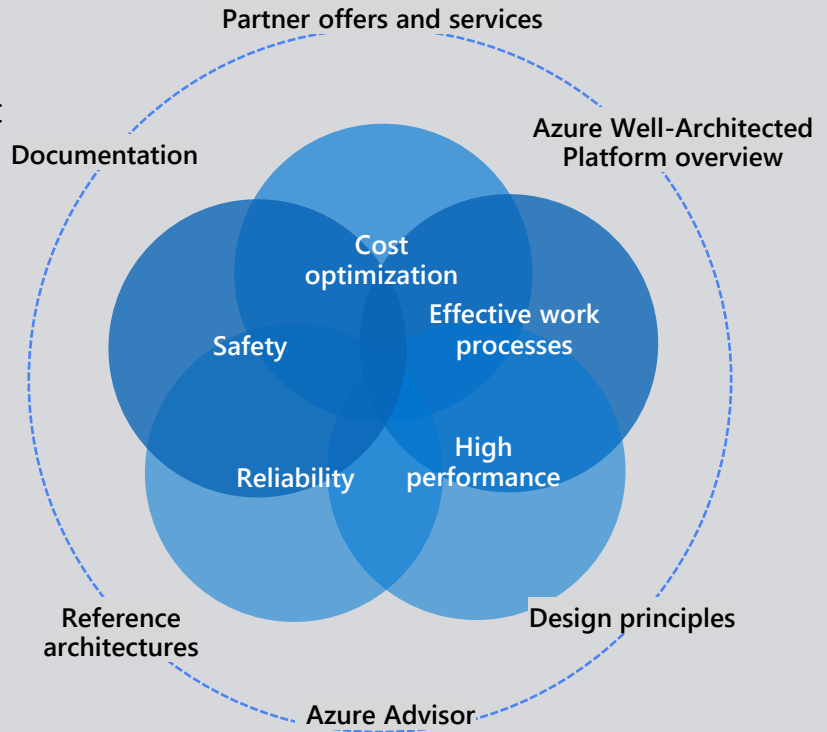

Microsoft Azure Web App allows you to scale both vertically and horizontally. We will provide recommendations for setting up scaling rules.

Improve the quality of your workloads with architectural guidelines

Microsoft Azure Well-Architected Platform is based on five key principles:

- Cost optimization
- Effective work
- High performance
- Reliability
- Safety

Well-architected ecosystem includes resources that help effectively work with the platform in practice.

SMART business – your partner of the future

ADVANCED SPECIALIZATION

Modernization of Web Applications to Microsoft Azure
Adoption and Change Management
Meetings and Meeting Rooms

Microsoft Advanced Specializations are awarded to a partner upon successful completion of a series of exams and an independent audit.

The **Modernization of Web Applications** specialization demonstrates SMART business' knowledge and experience in migrating and deploying production web application workloads, applying DevOps practices, and managing application services in Azure.
